LAB EXERCISE 10

SCHEDULE REQUIREMENTS - DAILY, WEEKLY, MONTHLY

HOSPITAL MANAGEMENT SYSTEM

Aim:

To configure daily appointment reminders, weekly appointment summaries, and monthly appointment reports in the Hospital Management System using scheduled workflows in Zoho Creator.

Procedure / Implementation:

1. Open the Hospital Management System application in Zoho Creator and navigate to Workflow > Schedules.
2. Create separate daily, weekly, and monthly workflows with the required recurrence, start date, and executiontime.
3. Add a Deluge script action to each workflow, save or update the script, and use Execute to test it.
4. Return to the Schedules list and verify that the configured workflows are enabled.

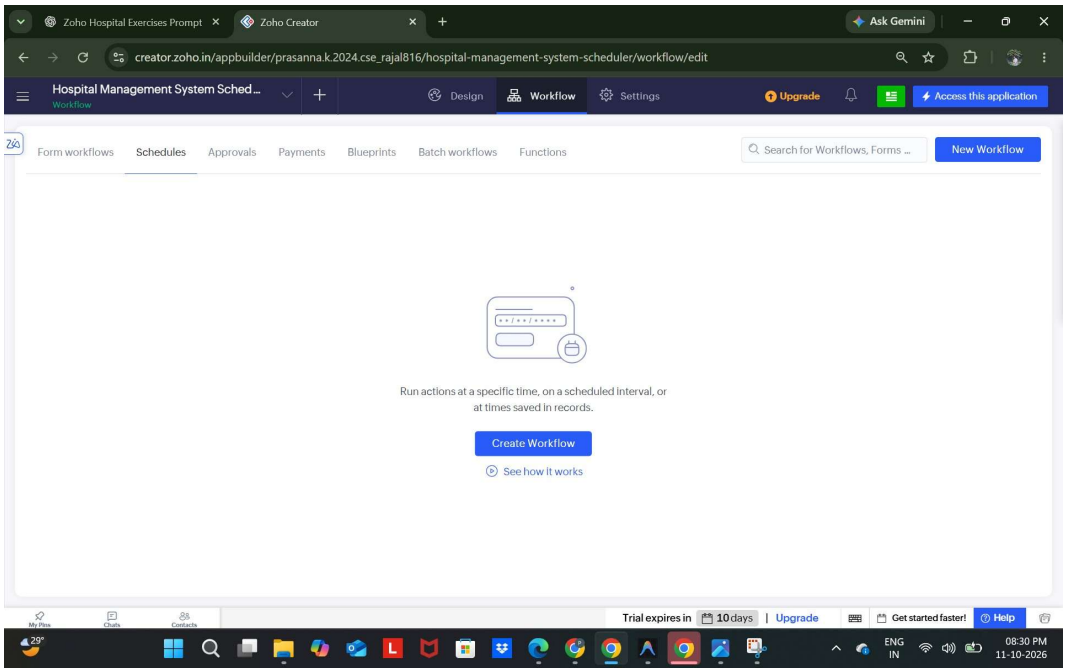

Figure 1: Workflow > Schedules tab before adding the scheduled workflows.

1. DAILY APPOINTMENT REMINDER SCHEDULE

The daily workflow is configured to run at 08:00 AM. Its Deluge script checks appointments for the following day, keeps records with status Scheduled or Confirmed where the reminder has not been sent, retrieves the linked patient email, sends the appointment date and time, and marks the reminder status as Sent.

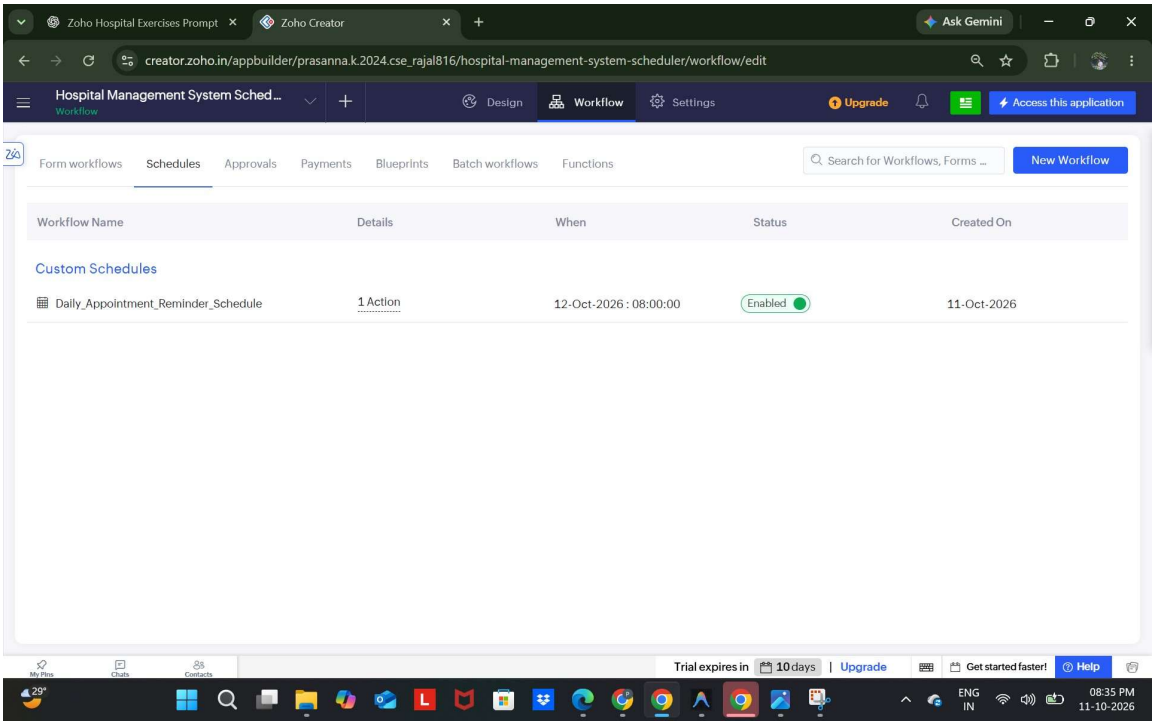

Figure 11: Schedules list showing Daily_Appointment_Reminder_Schedule enabled.

2. WEEKLY APPOINTMENT SUMMARY SCHEDULE

The weekly workflow is configured to run at 09:00 AM. The script checks appointment records from the current date through the next seven days, includes Scheduled and Confirmed appointments, and builds an email summary showing appointment dates, times, and statuses. If no eligible appointments are found, it sends a no-appointments message.

3. MONTHLY APPOINTMENT REPORT SCHEDULE

The monthly workflow is configured to run at 09:00 AM with a monthly recurrence. Its Deluge script calculates the previous calendar month, counts appointments by Scheduled, Confirmed, Completed, Cancelled, and No Show status, formats the totals, and emails the report to the administrator account.

Result:

The daily appointment reminder, weekly appointment summary, and monthly appointment report workflows were configured in Zoho Creator. The screenshots show successful script test executions and the final Schedules list with all three workflows enabled.
