LAB EXERCISE 3

APPLICATION BUILDING USING ZIA AI ASSISTANT (HOSPITAL MANAGEMENT SYSTEM)

Aim

To build a Hospital Management System application using the Zia AI Assistant in Zoho Creator by providing application requirements and allowing Zia to generate the required use cases, data model, components and application interface.

Procedure

Open Zoho Creator and launch the Zia App Builder. Enter the Hospital Management System requirements in the Zia prompt, including the required hospital modules, roles and permissions. Review the generated use cases and data model, create the application, and access the generated dashboard and reports to verify the result.

Zia AI Assistant Prompt

The Zia AI Assistant is given instructions to create hospital roles and permissions and keep the application suitable for a college laboratory demonstration.

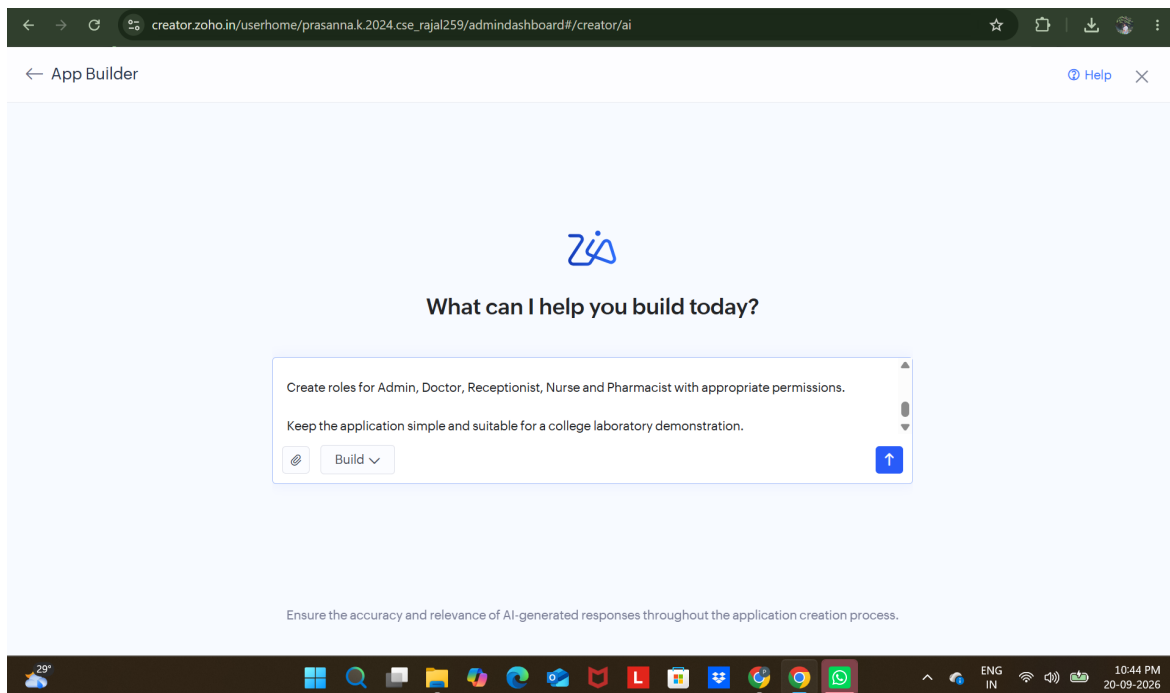

Figure 1: Zia AI Assistant Prompt

Data Model and Hospital Use Cases

The Zia App Builder presents hospital use cases such as patient registration, appointment scheduling, room allocation, prescription management and billing. The data model shows entities and their fields.

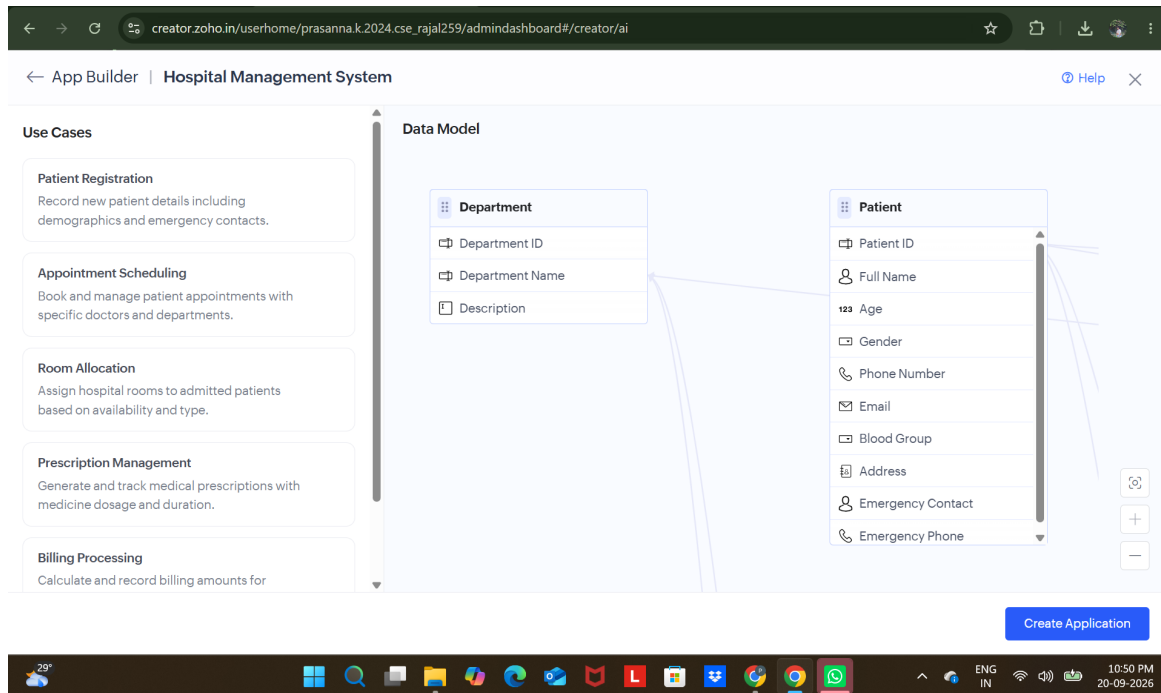

Figure 2: Data Model and Hospital Use Cases

Zia-Generated Application Confirmation

Zia confirms that the application has been created and provides access to the generated application. The builder also identifies application components such as permissions, blueprints and workflows.

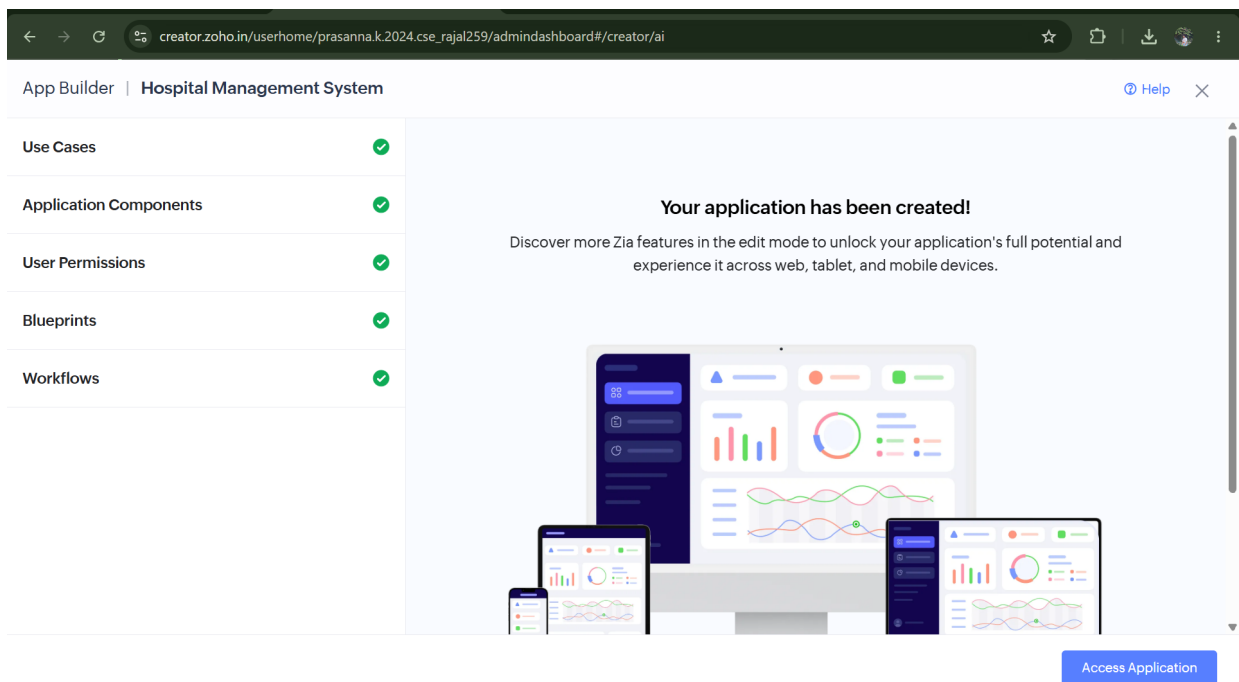

Figure 3: Zia-Generated Application Confirmation

Accessing the Hospital Management System Dashboard

The generated application opens with a dashboard containing quick links, floor-wise charts and appointment records. The navigation menu provides access to the major hospital modules.

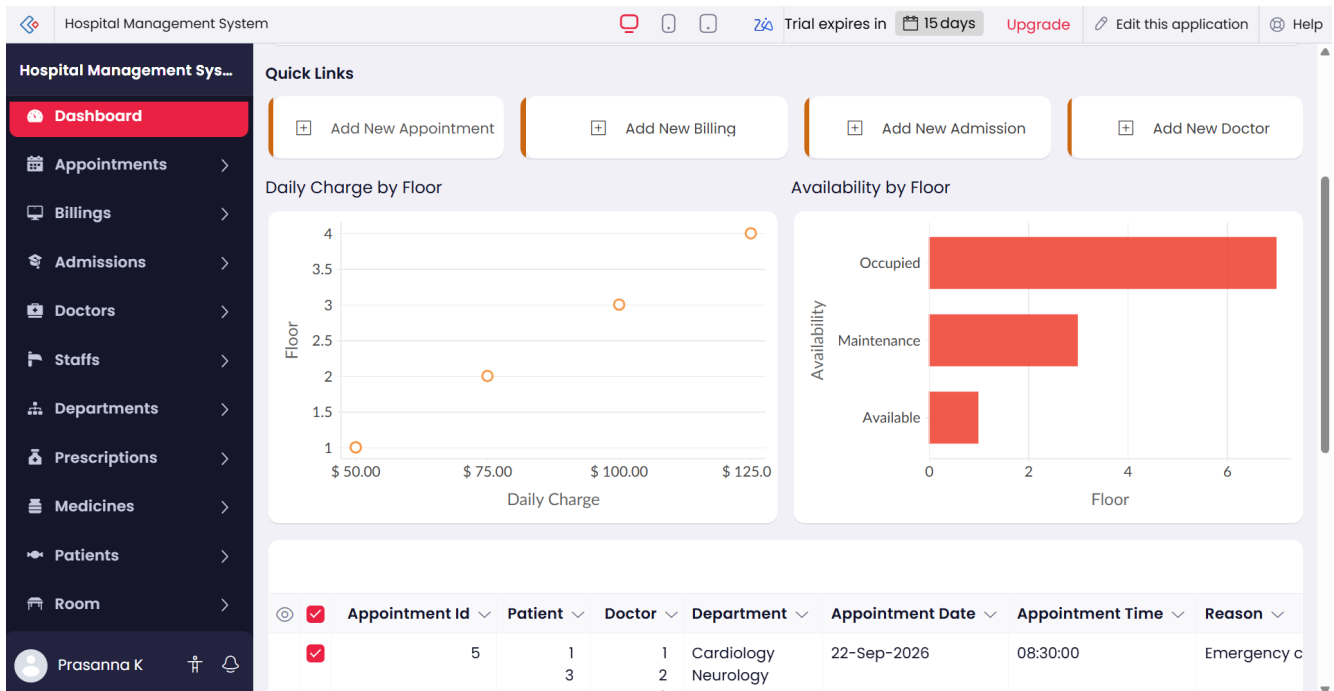

Figure 4: Accessing the Hospital Management System Dashboard

Dashboard Summary and Analytics

The dashboard provides summary cards for amounts, prices, daily charges and appointments, followed by status indicators, quick links and graphical views.

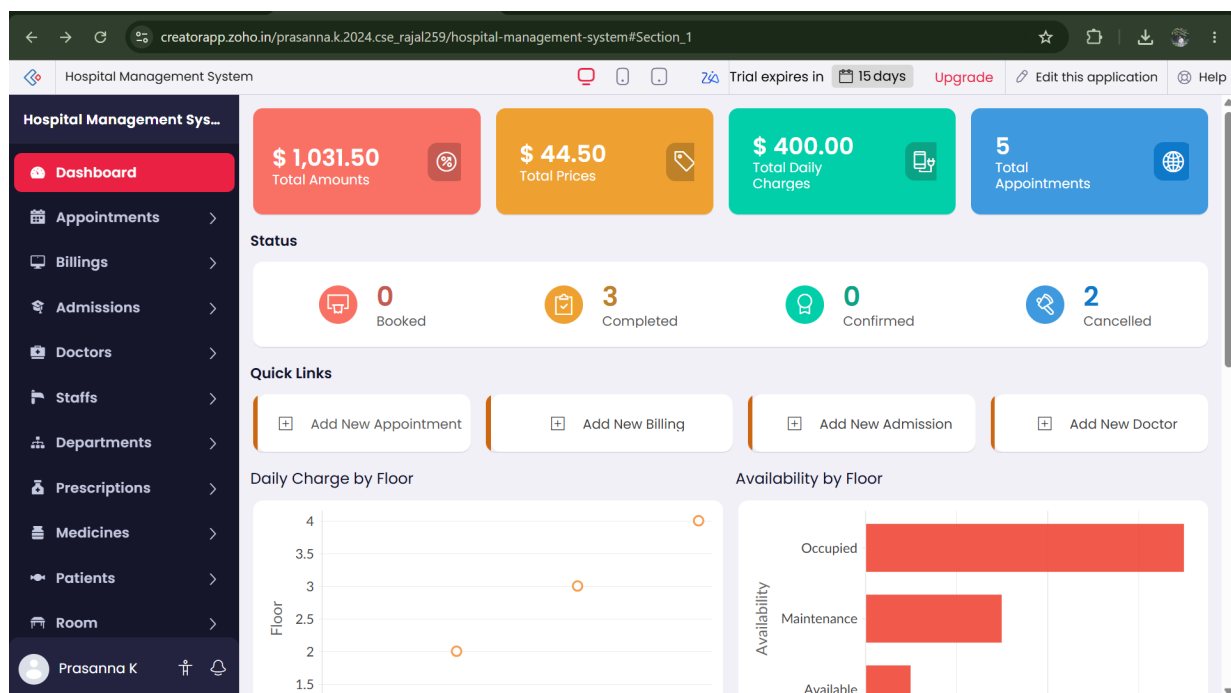

Figure 5: Dashboard Summary and Analytics

Viewing the Complete Appointment List

The appointment list shows multiple records together with their associated patient and doctor information, department, date, time and reason.

Appointment Id	Patient	Doctor	Department	Appointment Date	Appointment Time	Reason
5	1	1	Cardiology	22-Sep-2026	08:30:00	Emergency c
	3	2	Neurology			
		3				
		4				
4	2	1	Cardiology	21-Sep-2026	15:45:00	Consultation
		2	Pediatrics			
		3	Neurology			
		4	Orthopedics			
3	1	2	Cardiology	21-Sep-2026	14:00:00	Annual physi
	2	3	Pediatrics			vaccination
	3	4	Neurology			
	4	5	Orthopedics			
	5		Oncology			
2	2	1	Cardiology	20-Sep-2026	10:30:00	Follow-up for
	3	2	Pediatrics			
		3	Orthopedics			
		4				
1	2	1	Pediatrics	20-Sep-2026	09:15:00	Routine chec
		2	Neurology			
		3				

Figure 6: Viewing the Complete Appointment List

Viewing Appointment Records

The appointment report displays patient, doctor, department, appointment date and time, reason and status in a structured tabular format.

Doctor	Department	Appointment Date	Appointment Time	Reason	Status
1	Cardiology	22-Sep-2026	08:30:00	Emergency care for minor injury	Completed
2	Neurology				
3					
4					
1	Cardiology	21-Sep-2026	15:45:00	Consultation for persistent headaches	Cancelled
	Pediatrics				
	Neurology				
	Orthopedics				
2	Cardiology	21-Sep-2026	14:00:00	Annual physical examination and vaccination	Completed
3	Pediatrics				
4	Neurology				
	Orthopedics				
	Oncology				
1	Cardiology	20-Sep-2026	10:30:00	Follow-up for chronic back pain	Cancelled
2	Pediatrics				
3	Orthopedics				
4					
1	Pediatrics	20-Sep-2026	09:15:00	Routine checkup for flu symptoms	Completed
2	Neurology				
3

Result

The Hospital Management System was successfully created using the Zoho Creator Zia AI Assistant. The generated application includes hospital use cases, a structured data model, dashboard and appointment views, and application components required for the laboratory demonstration.
