LAB EXERCISE 5

DASHBOARD AND PANEL CHART CREATION FOR HOSPITAL MANAGEMENT SYSTEM

Aim

To create and configure a dashboard for the Hospital Management System in Zoho Creator using summary panels, status panels, charts and an embedded appointment report for clear visualization of hospital data.

Configuring Dashboard Panels

Panels were used to display important numerical information in a compact format. The panel configuration provides different presentation styles for values and labels. The panel elements can be arranged on the dashboard to show key hospital information clearly.

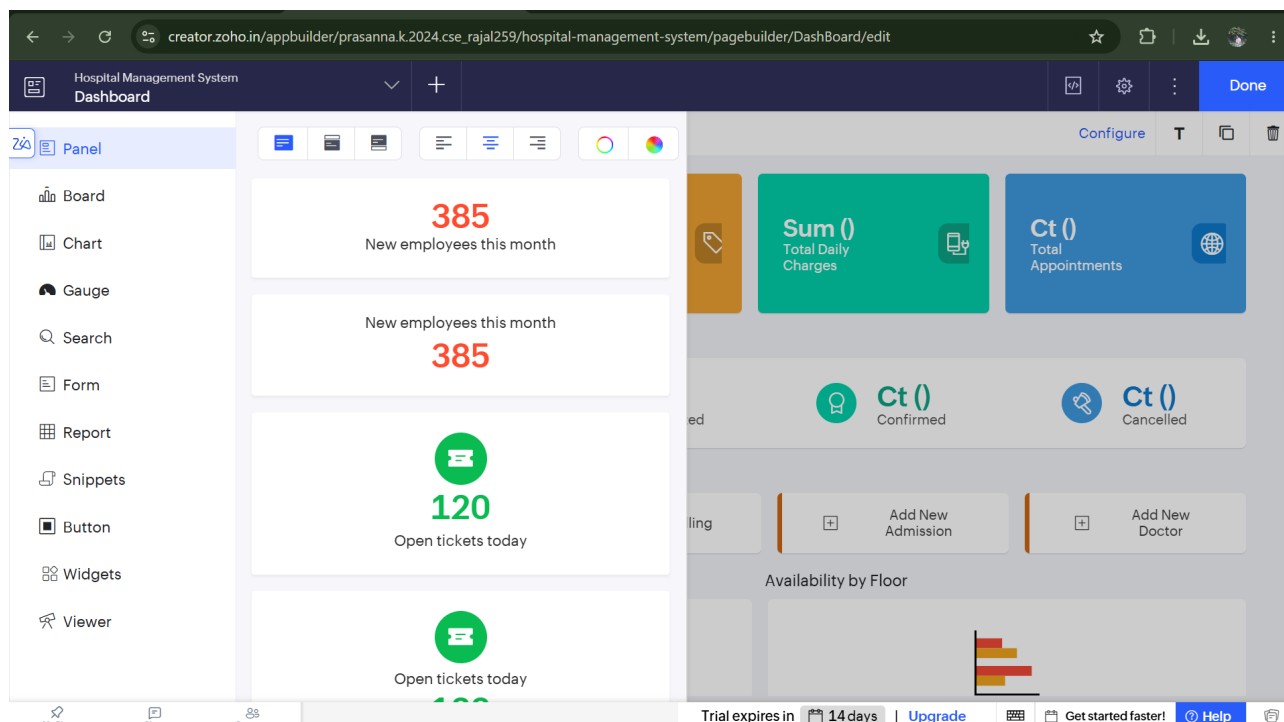

Figure: Panel configuration options for displaying dashboard values and labels.

Selecting Chart Type

The Chart section provides different visualization types such as Column, Stacked Column and Stacked Percentage Column. A suitable chart type can be selected according to the hospital data represented in the dashboard.

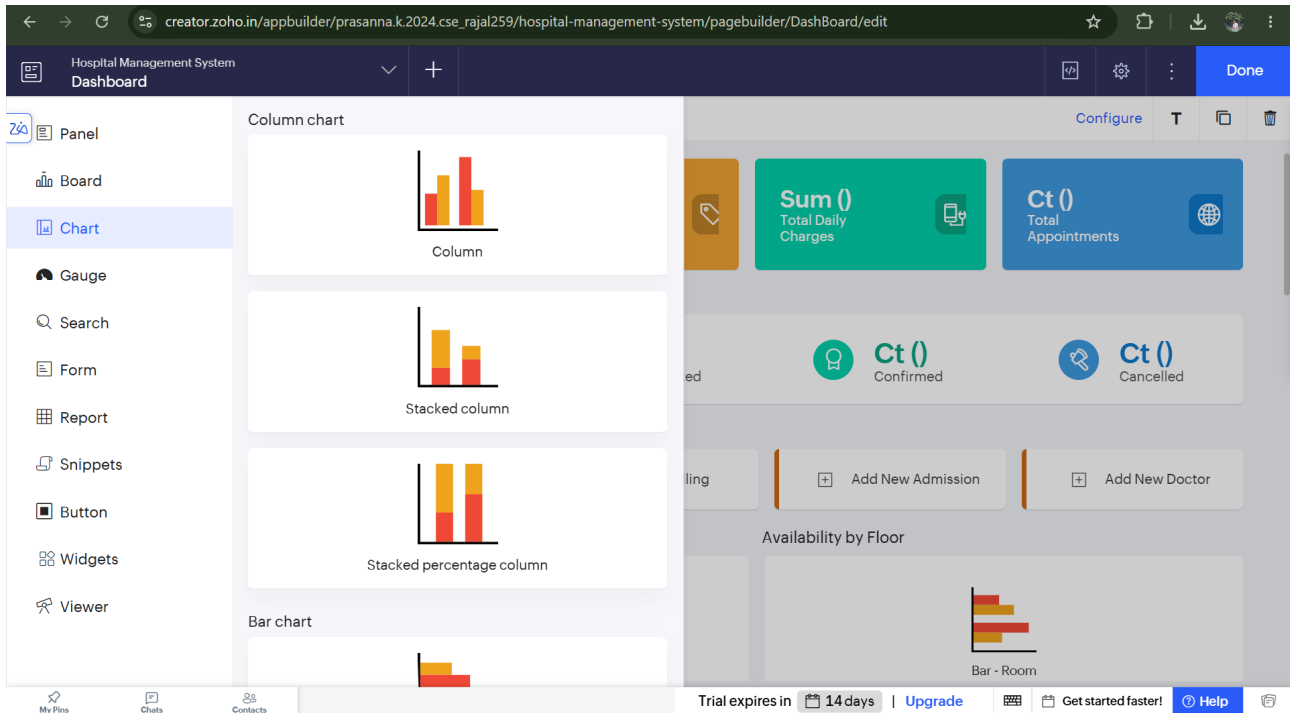

Figure: Chart selection panel showing available column and stacked chart types.

Embedding the All Appointments Report

The Report component was selected from the dashboard builder and the existing All Appointments report was chosen. The report can be embedded directly in the dashboard or provided through a button for viewing the complete appointment records.

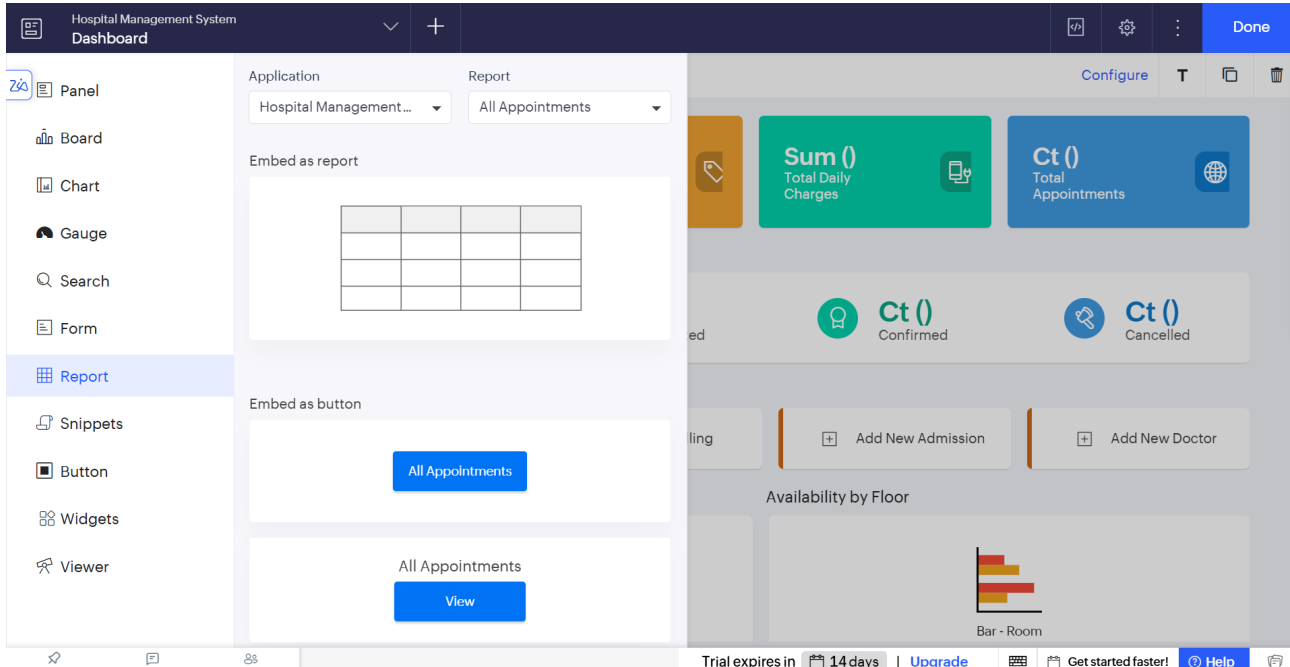

Figure: Report configuration for embedding the existing All Appointments report in the dashboard.

Adding Chart Components

In the dashboard editor, the Chart component was selected to add graphical representations of the existing Room data. The chart areas were arranged with the other dashboard components so that the visualizations could be displayed together.

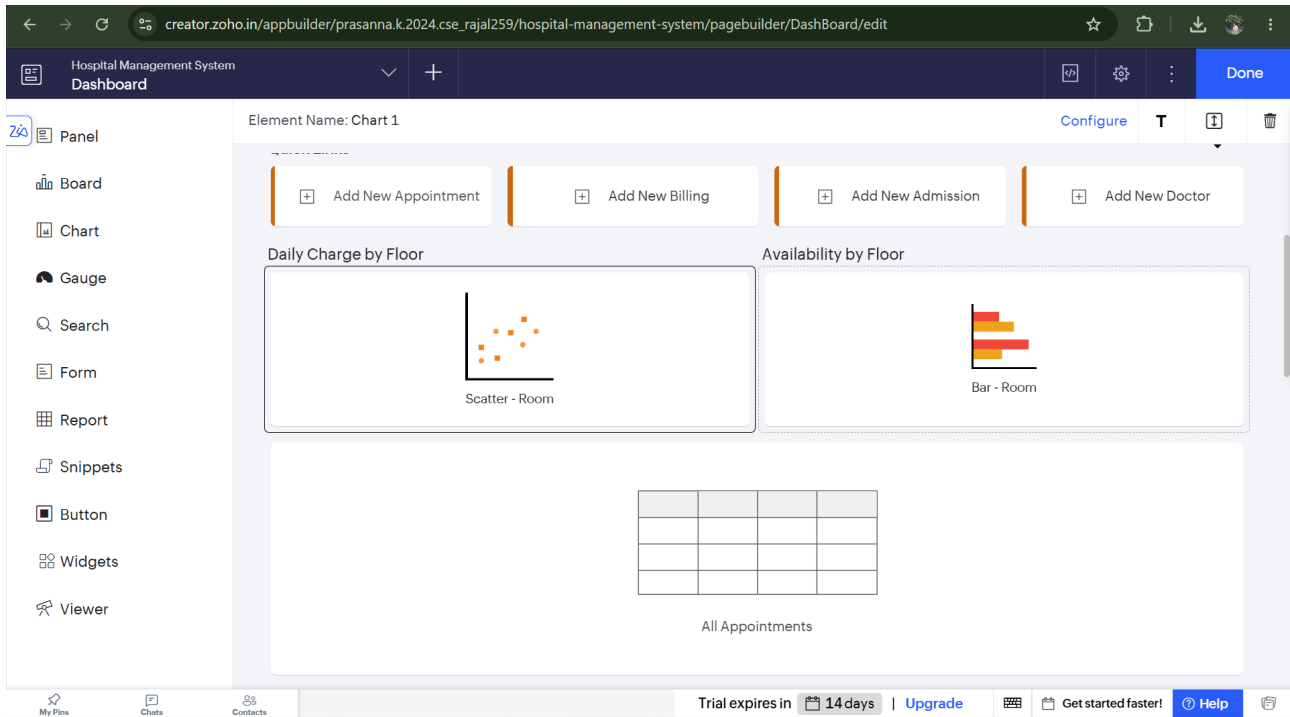

Figure: Dashboard editor showing chart components for Daily Charge by Floor and Availability by Floor.

Dashboard Summary and Status Panels

The completed dashboard displays four summary panels for Total Amounts, Total Prices, Total Daily Charges and Total Appointments. A separate status panel summarizes Booked, Completed, Confirmed and Cancelled appointments. These panels provide a quick view of the current hospital data.

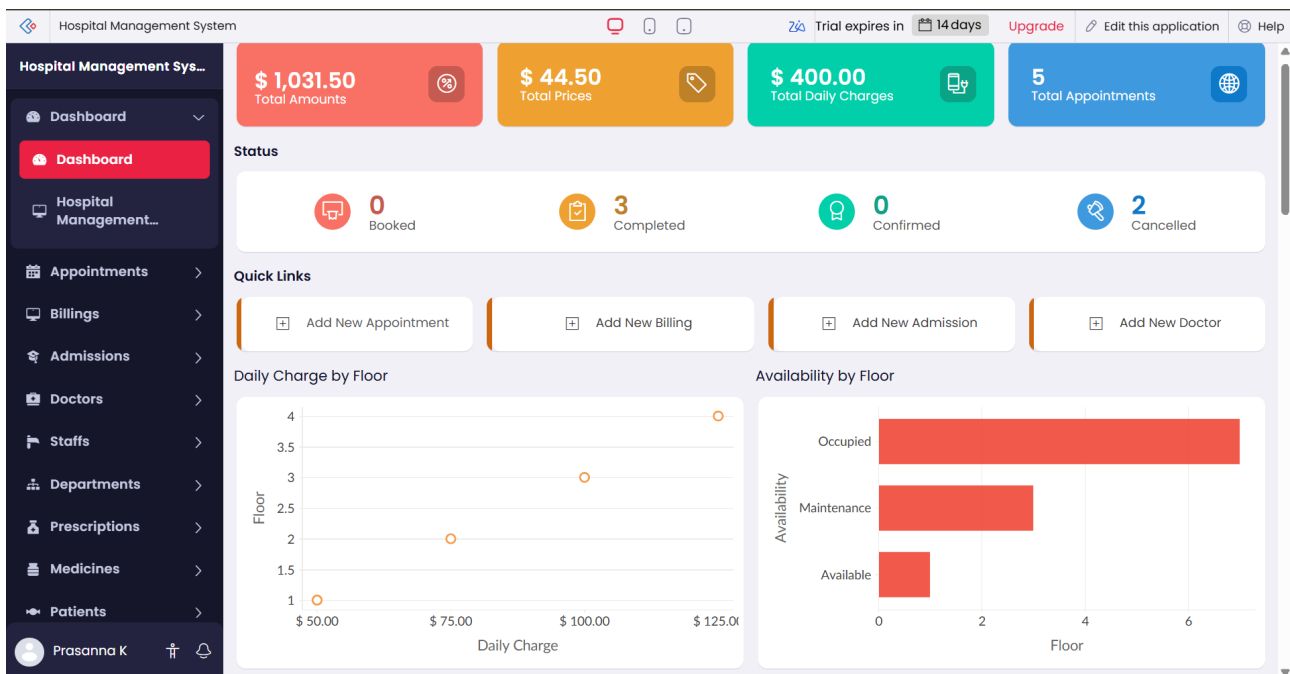

Figure: Completed dashboard showing summary panels, appointment status counts and chart visualizations.

All Appointments Report

The All Appointments report was used as the tabular data section of the dashboard. It displays appointment records with patient, doctor, department, date, time, reason and status details. The report provides the detailed records behind the dashboard visualization.

	Patient	Doctor	Department	Appointment Date	Appointment Time	Reason	Status
5	1 3	1 2 3 4	Cardiology Neurology	22-Sep-2026	08:30:00	Emergency care for minor injury	Completed
4	2	1	Cardiology Pediatrics Neurology Orthopedics	21-Sep-2026	15:45:00	Consultation for persistent headaches	Cancelled
3	1 2 3 4 5	2 3 4	Cardiology Pediatrics Neurology Orthopedics Oncology	21-Sep-2026	14:00:00	Annual physical examination and vaccination	Completed
2	2 3	1 2 3 4	Cardiology Pediatrics Neurology Orthopedics	20-Sep-2026	10:30:00	Follow-up for chronic back pain	Cancelled
1	2	1 2 3	Pediatrics Neurology	20-Sep-2026	09:15:00	Routine checkup for flu symptoms	Completed

Result

The Hospital Management System dashboard was created and configured successfully using Zoho Creator. Summary panels, appointment status panels, room-related charts and the All Appointments report were arranged to provide a single-page view of important hospital information.
