

ASSIGNMENT 04: LIBRARY BOOK ISSUE COMMAND CENTER PAGE ELEMENTS USE CASE

Objective:

To design and configure a single internal Library Book Issue Command Center page in Zoho Creator for the existing Library Book Issue Management application. The page brings together circulation summaries, book and member lookup, issue-request monitoring, quick actions and reference information using the eleven Page Builder elements: Panel, Board, Chart, Gauge, Search, Form, Report, Snippets, Button, Widgets and Viewer.

Procedure:

1. Command Center Main Panel Configuration:

Create the Library_Command_Center_Page in the existing application and use a Panel named Command_Center_Main_Panel to organize its contents. Begin by selecting Page, choosing a blank layout, naming the page and opening the Page Builder. Configure summary Panels from the existing Book Issue Request, Book, and Reading Room Occupancy data so library staff can review fines, copy totals, seating capacity and occupancy.

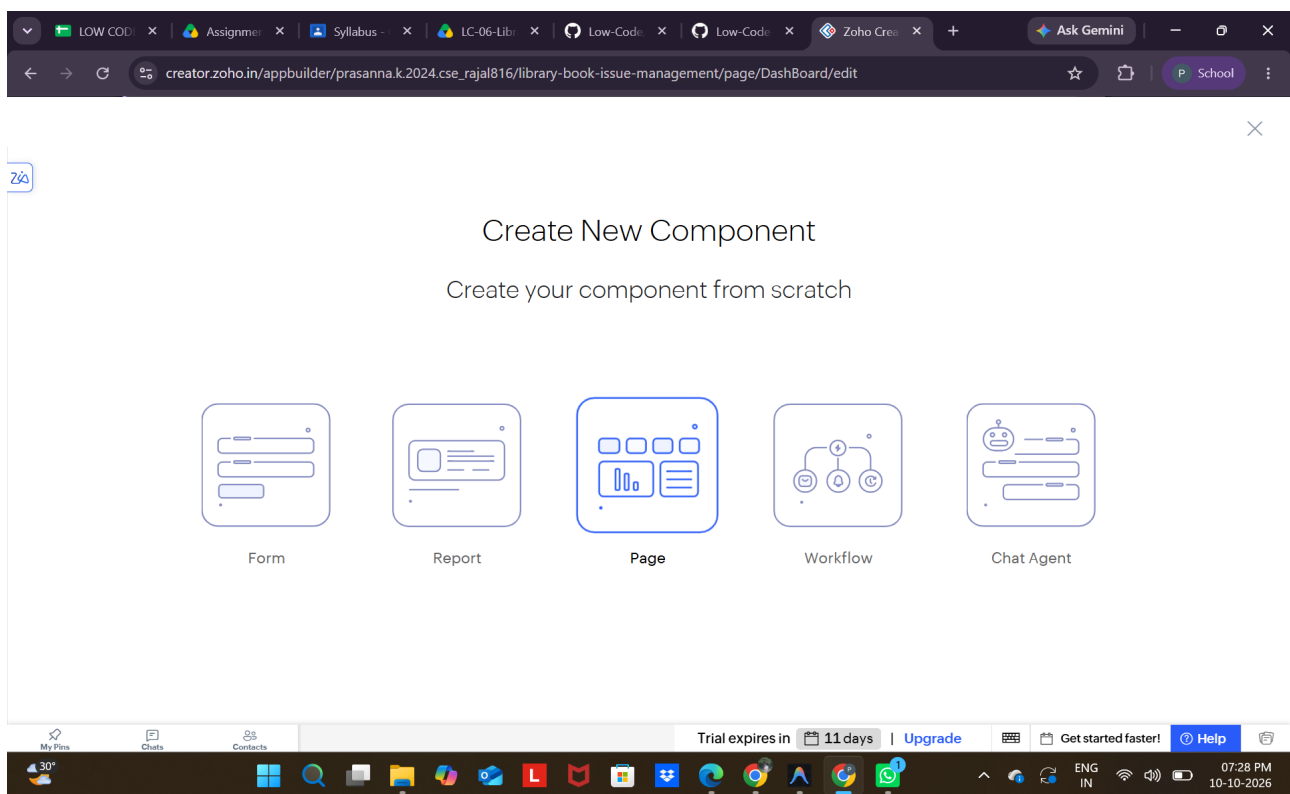

Figure 1: Selecting Page from the Zoho Creator component options.

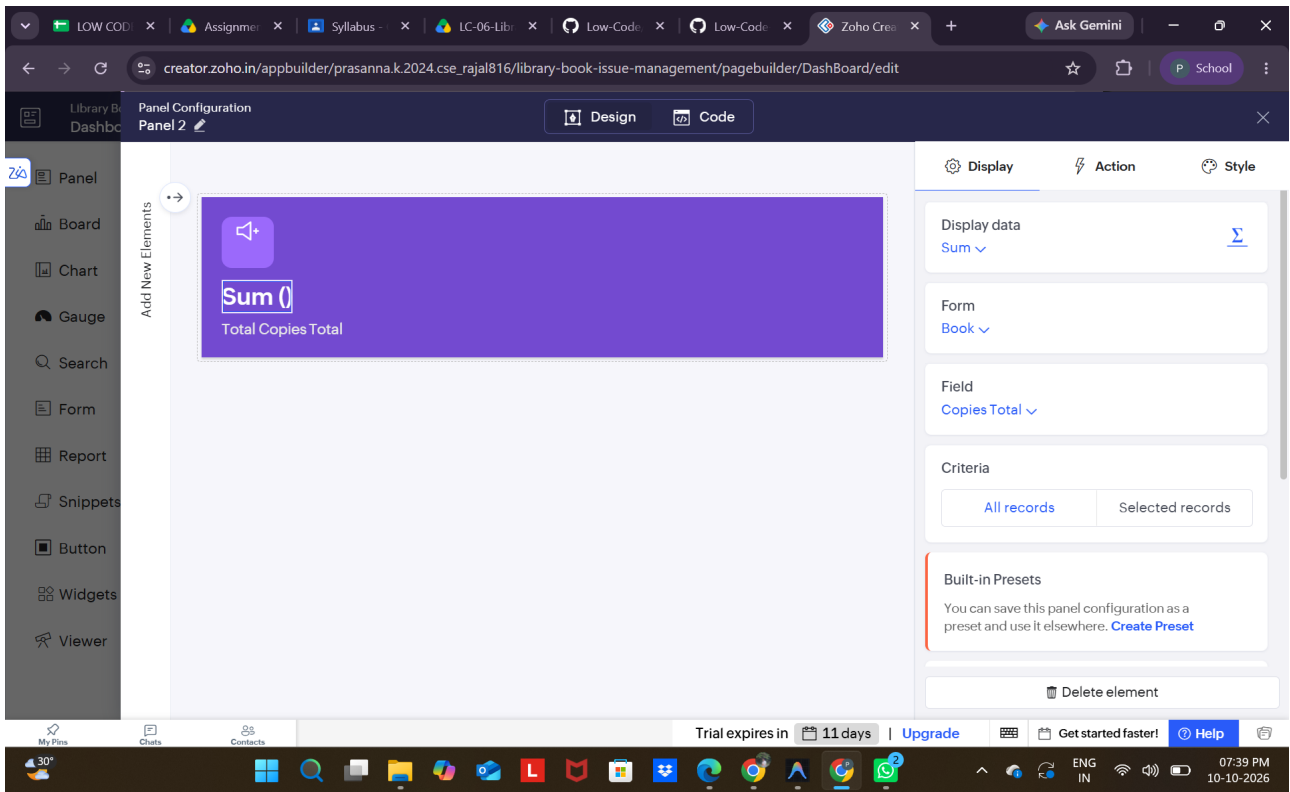

Figure 6: Configuring the total copies summary Panel from Book data.

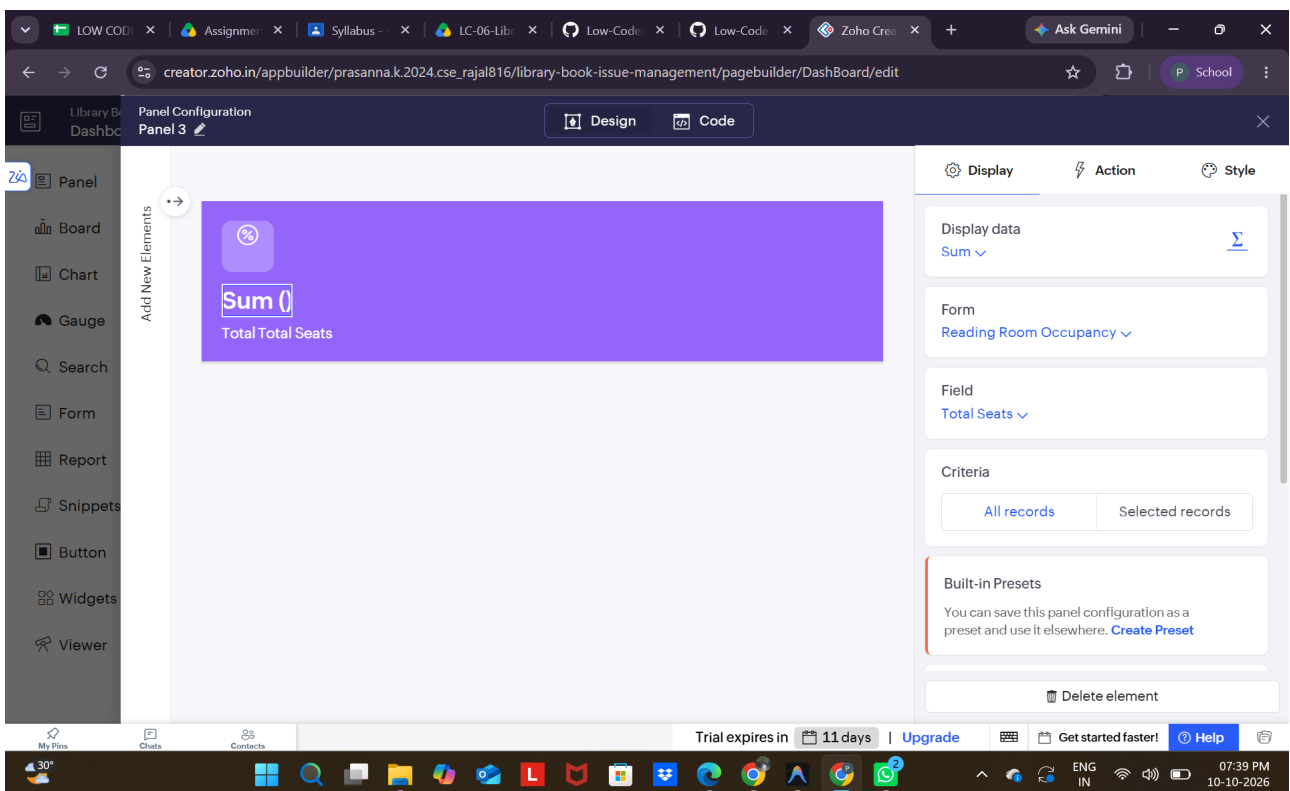

Figure 7: Configuring the total reading-room seats summary Panel.

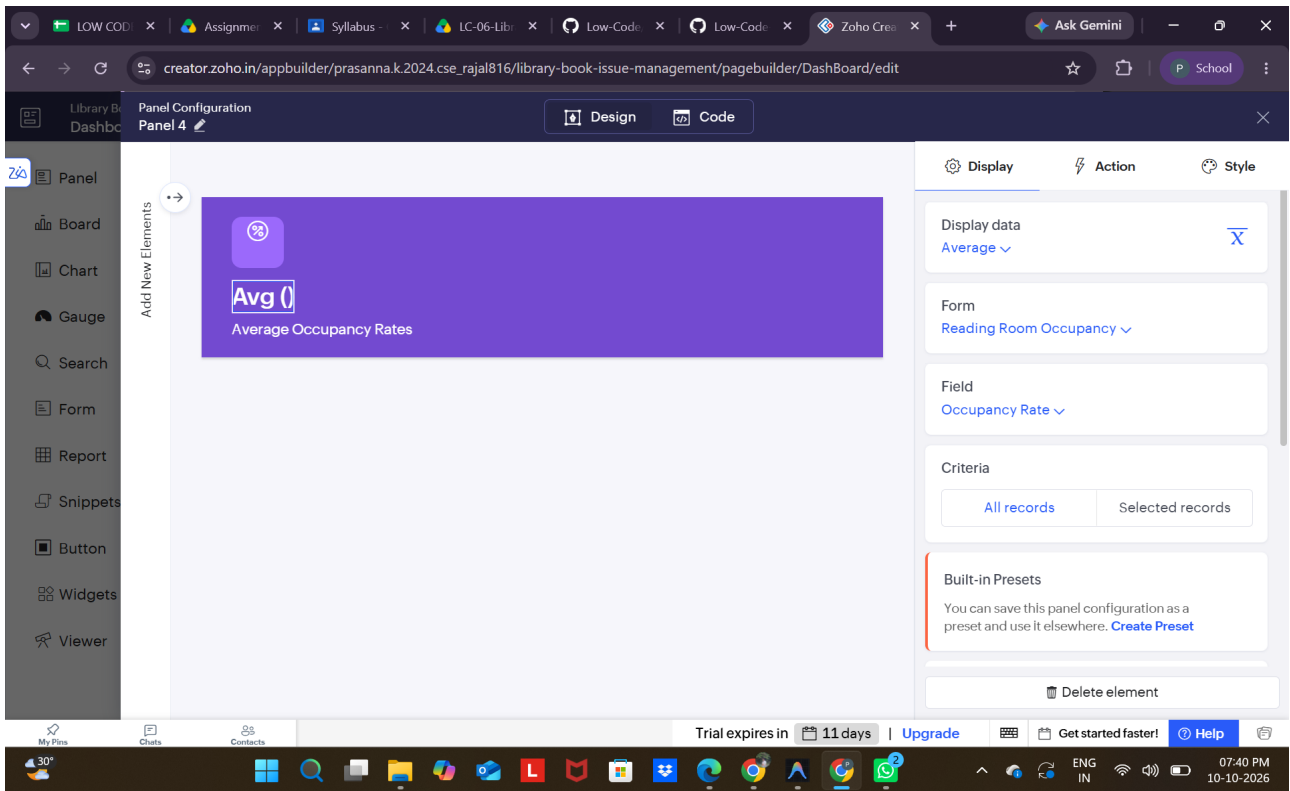

Figure 8: Configuring the average occupancy-rate summary Panel.

2. Overview Strip Setup (Section 1):

Configure the overview area to present library activity at a glance. Add member-status counts and charts based on Reading Room Occupancy and Book Issue Request data. Position the Monthly Circulation Target Gauge and Book/Member Search element in the overview area where those elements are available in the Page Builder.

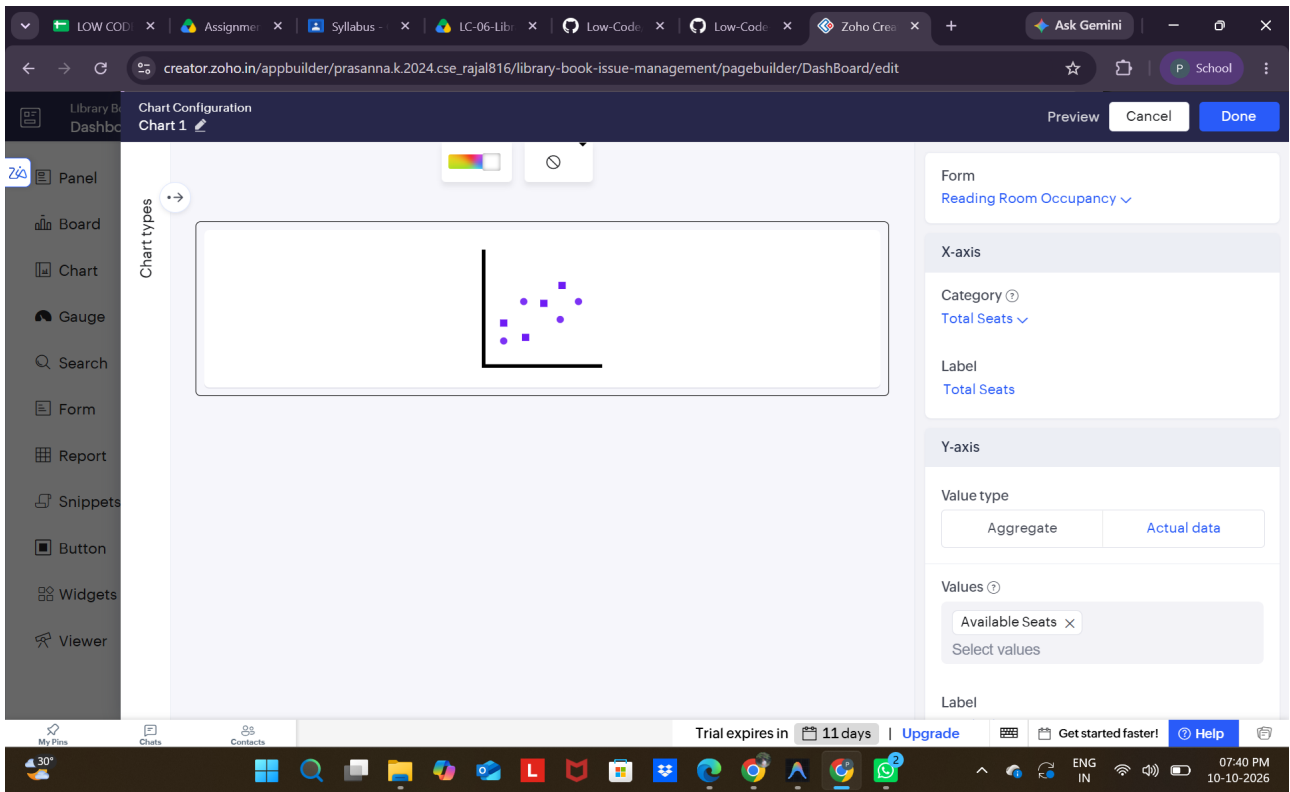

Figure 10: Configuring a chart using Reading Room Occupancy data.

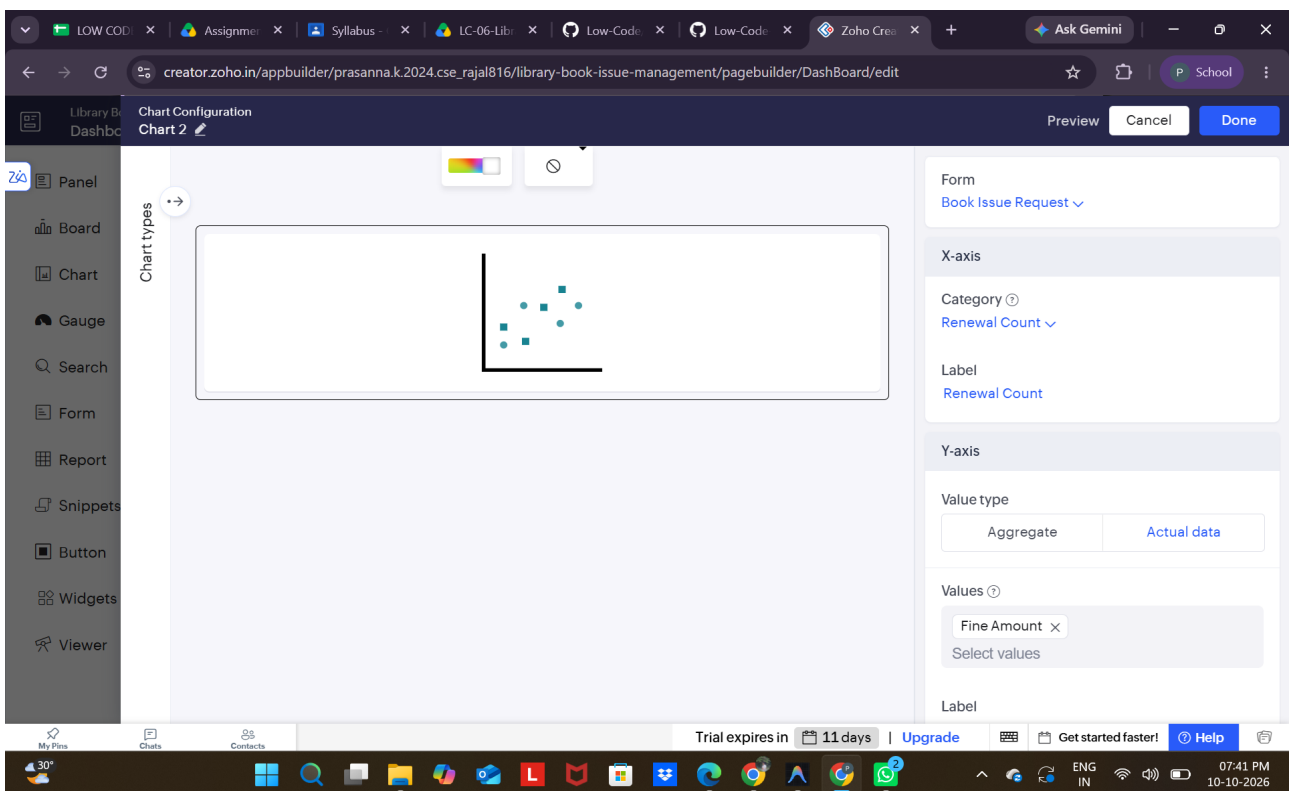

Figure 11: Configuring an issue-request chart with Renewal Count and Fine Amount.

3. Processing Workspace Setup (Section 2):

Add an Issue_Status_Board based on Book Issue Request records and map its columns to Requested, Approved, Issued, Returned and Overdue. Place a Send_Overdue_Reminder_Button near the Board and test its workflow before sending real emails. Embed the request report so staff can inspect record-level details and monitor the current status of each request.

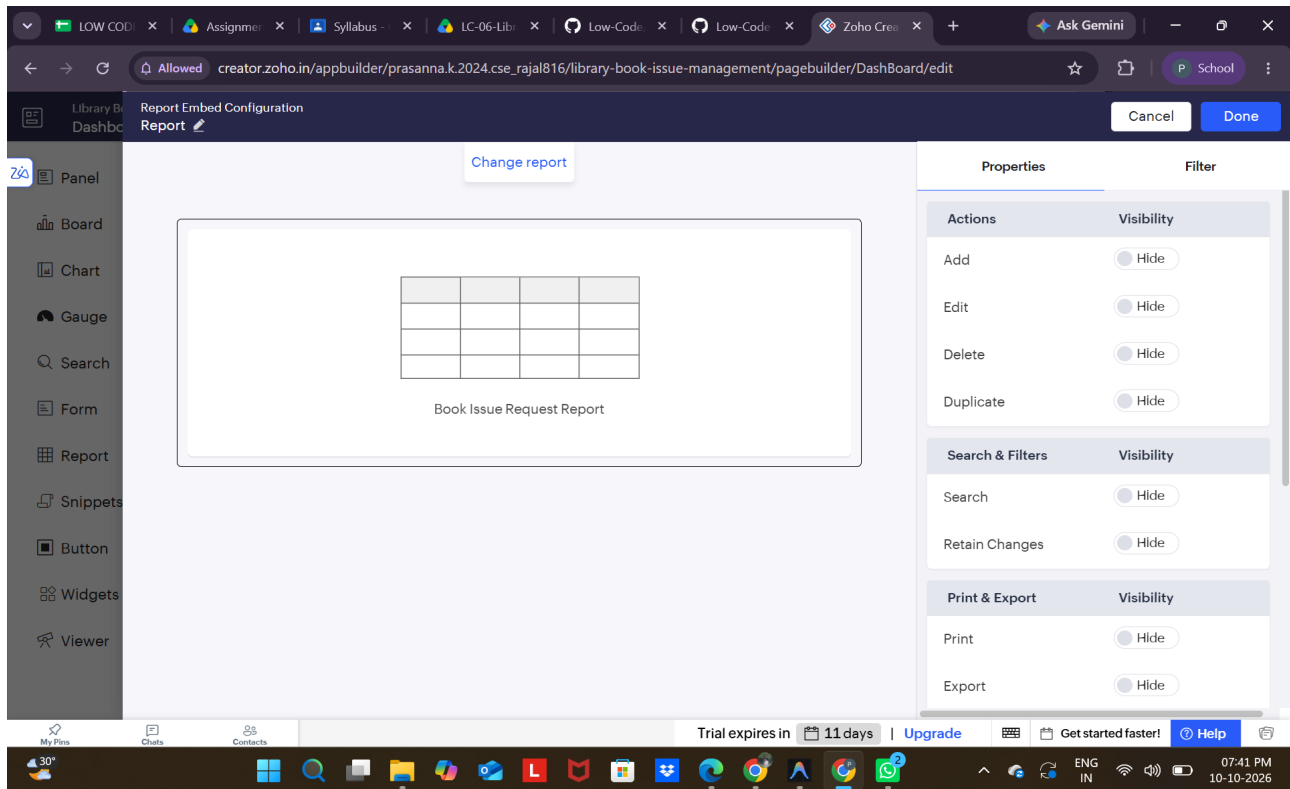

Figure 12: Embedding the Book Issue Request Report in the Page Builder.

4. Reference and Quick Actions Setup (Sections 3 and 4):

Embed the Full_Issue_Requests_Report in the lower section. The sidebar should provide a Quick_Counter_Issue_Form, a Library_Rules_Return_Policy_Snippet for borrowing and fine-policy reference, and a Recommendation_Letter_Viewer for uploaded faculty recommendation documents. The quick-action Buttons link to common library tasks, including adding a request, a member, a book and a monthly circulation target. Retain the form validation and access permissions configured in the existing application.

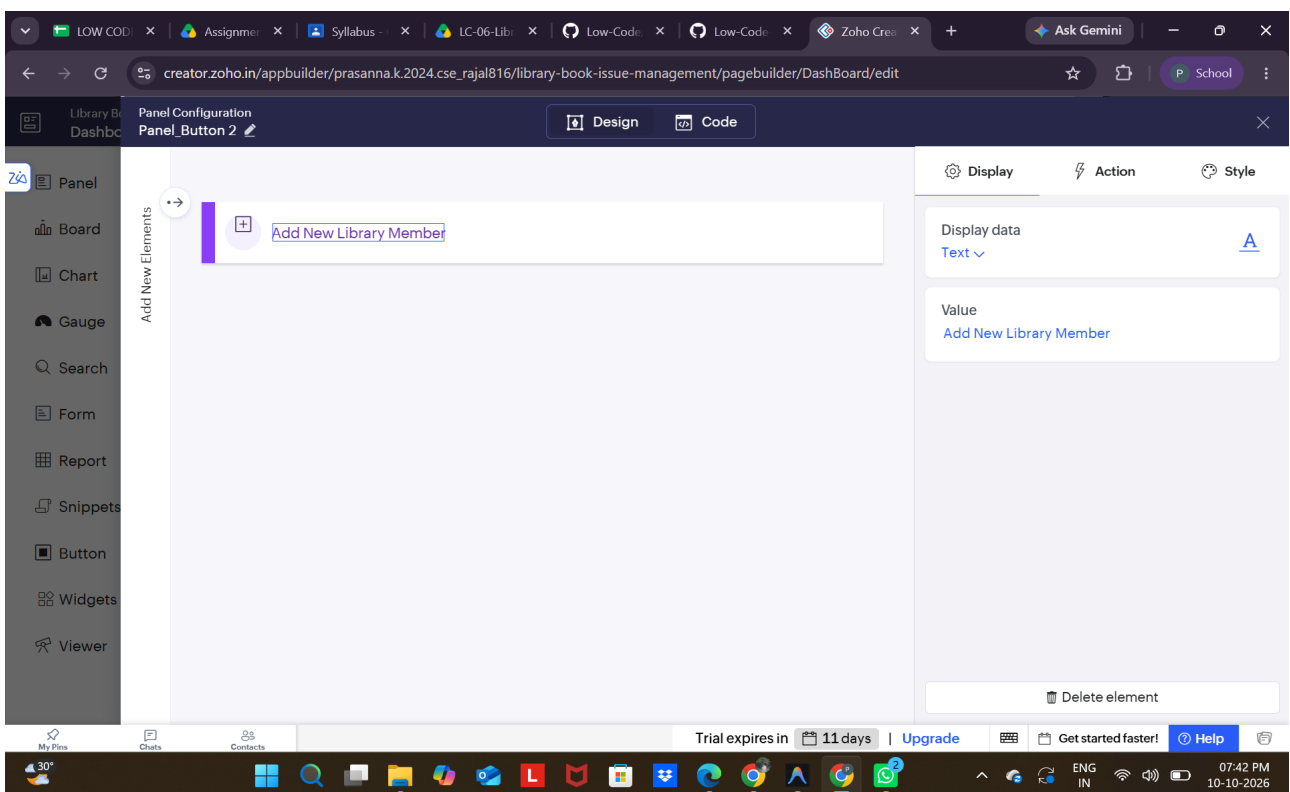

Figure 14: Configuring a quick-action Button to add a Library Member.

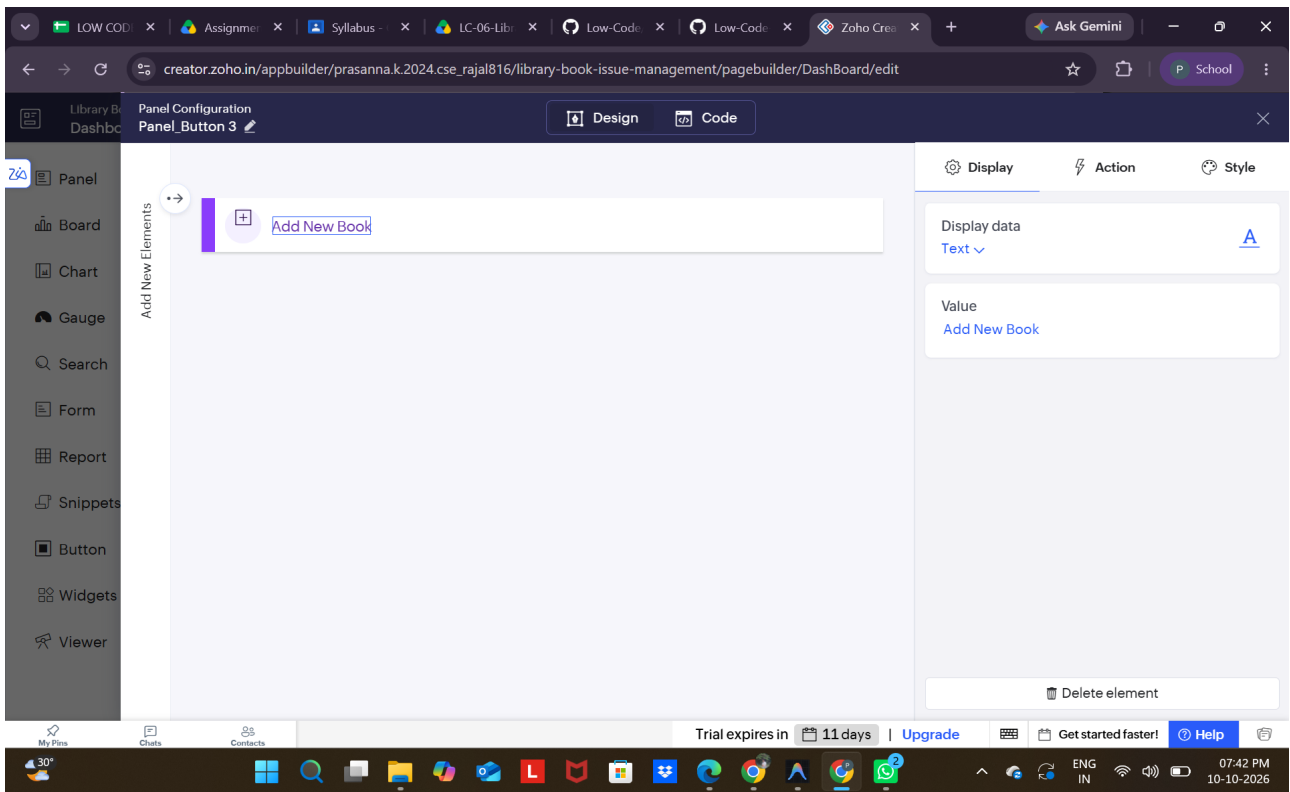

Figure 15: Configuring a quick-action Button to add a Book record.

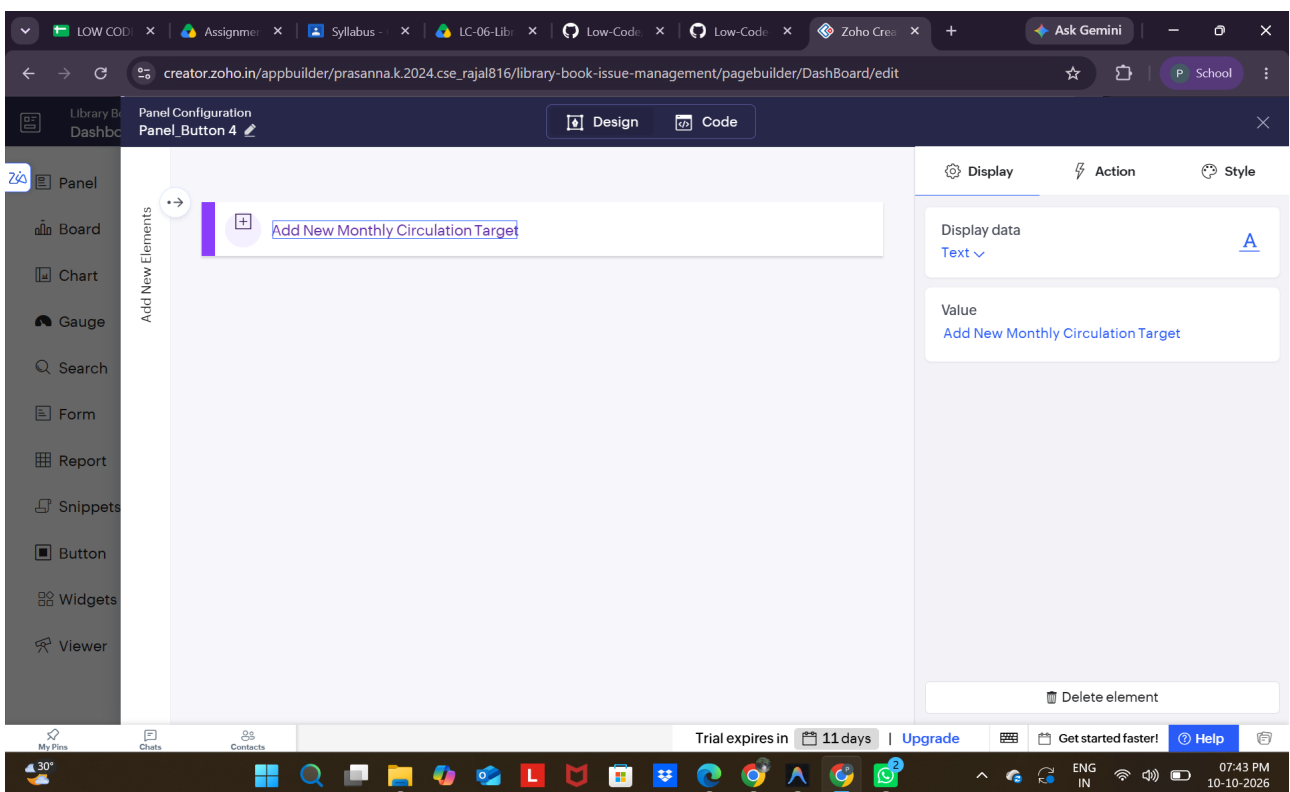

Figure 16: Configuring a quick-action Button for Monthly Circulation Targets.

5. Operations Strip Setup (Section 5):

Place NewArrivals_And_ReadingRoom_Widgets in the lower portion of the Command Center. The New Arrivals area should display recently catalogued books, while the Reading Room widget should summarize seating capacity and occupancy using existing records. Keep the summary Panels, charts and quick links organized within the main Panel so the page works as one staff workspace. Preview the page and review the embedded report.

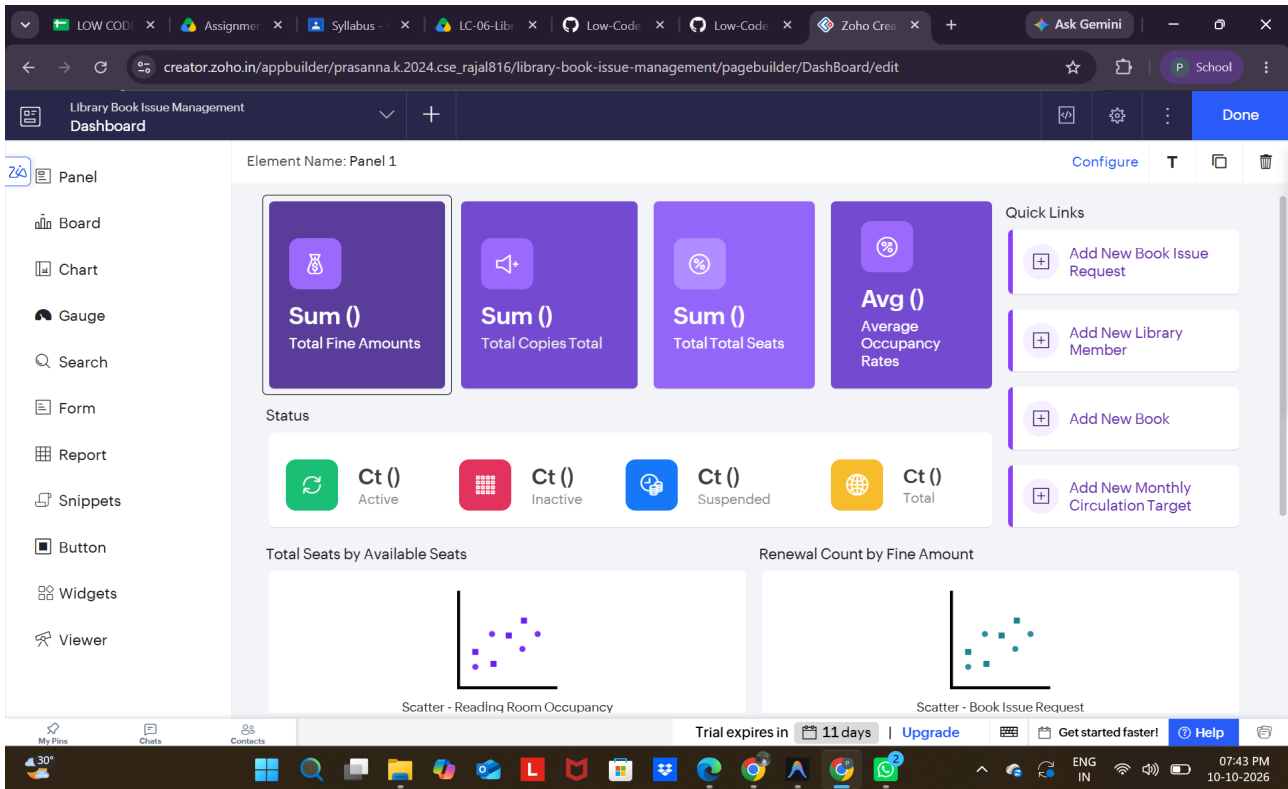

Figure 17: Reviewing the overall Page Builder layout with summary Panels, charts and quick links.

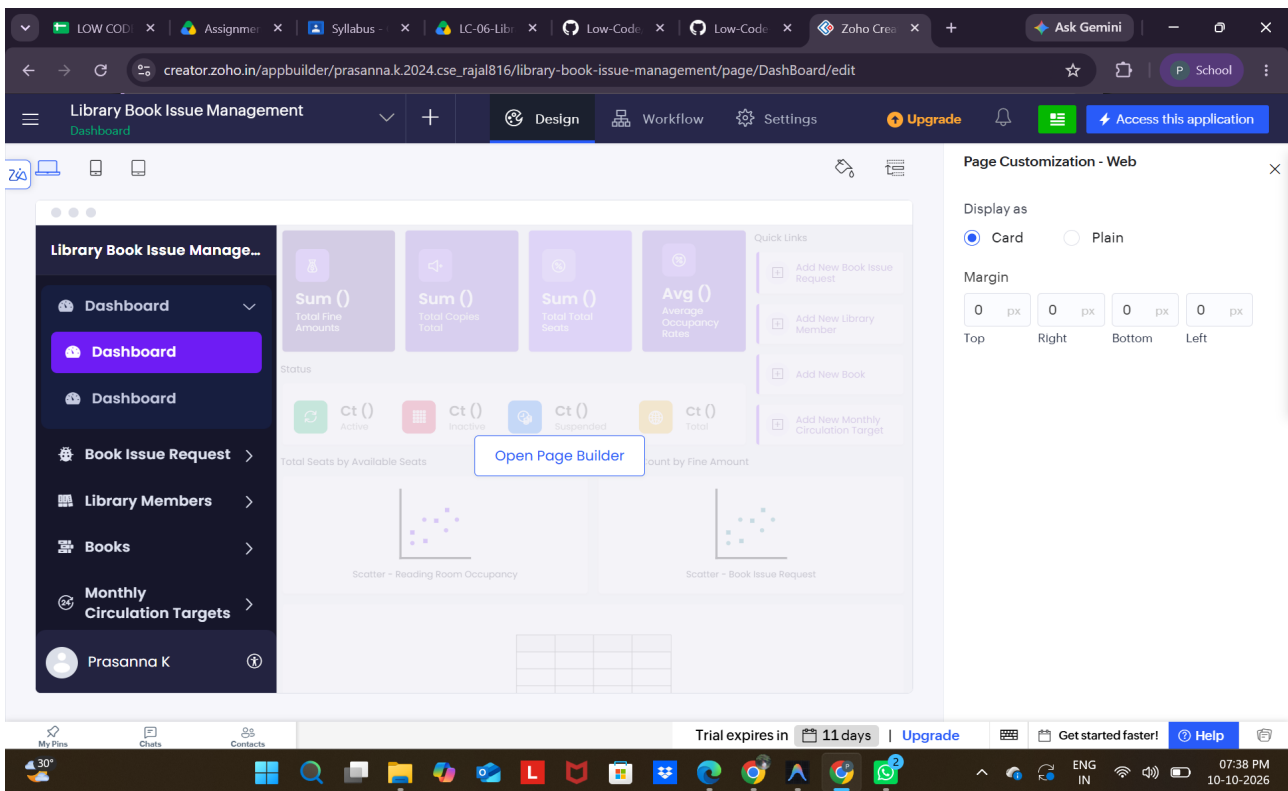

Figure 18: Viewing the page customization screen before opening the Page Builder.

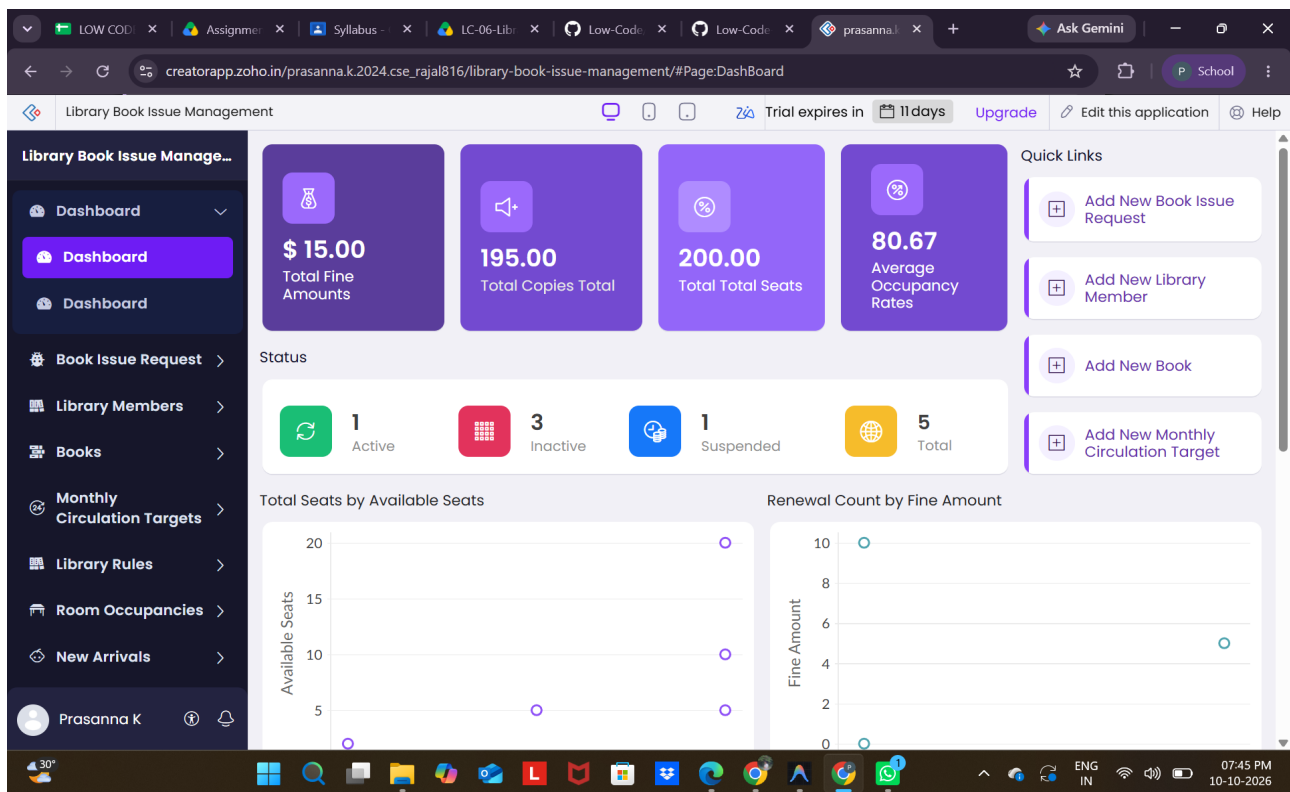

Figure 19: Previewing the dashboard with library summary cards and quick links.

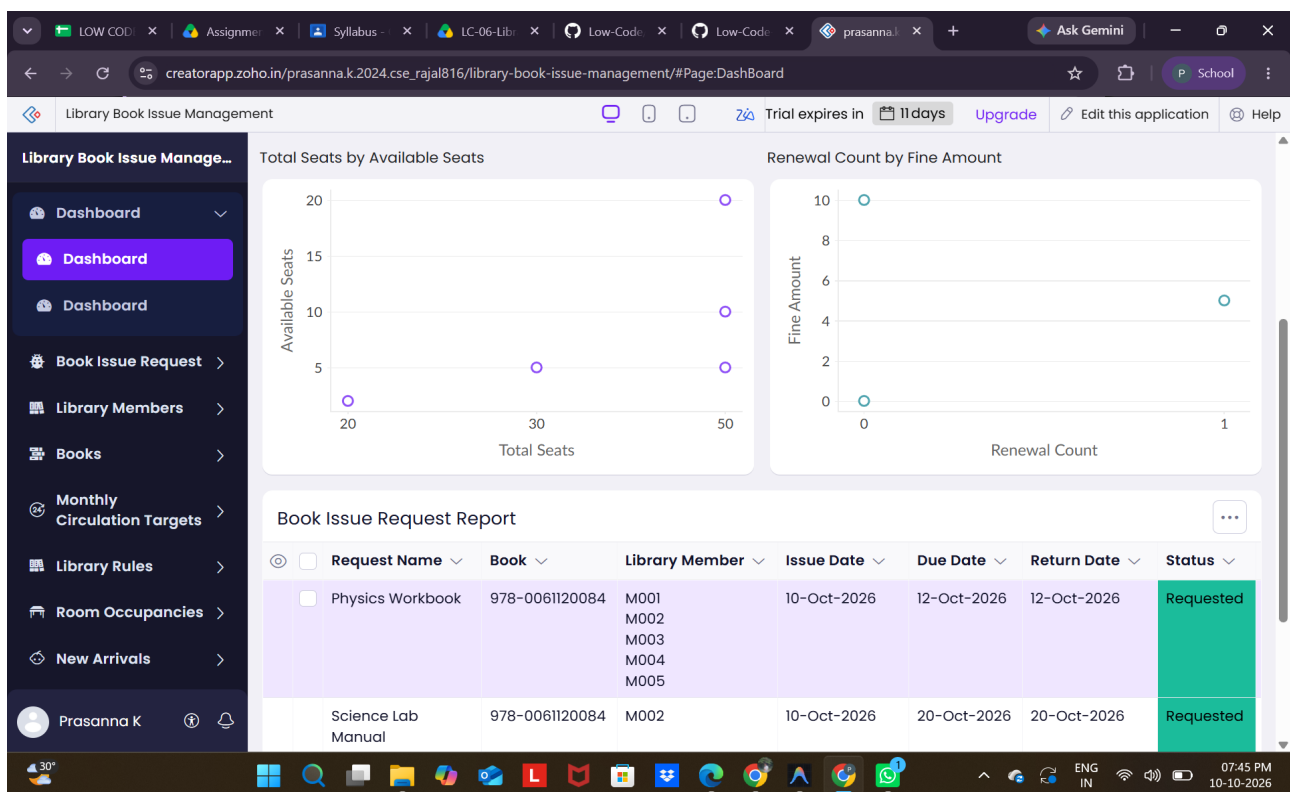

Figure 20: Viewing dashboard charts above the Book Issue Request Report.

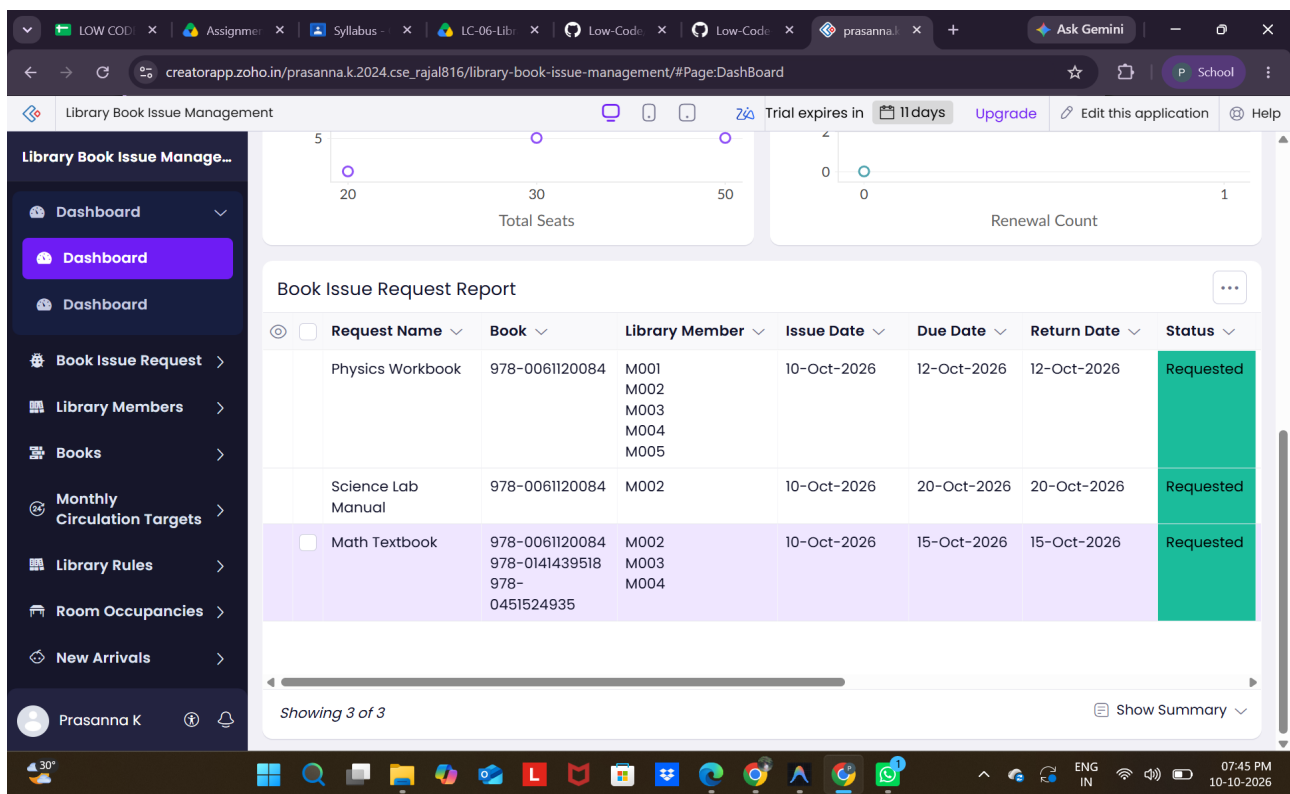

Figure 21: Reviewing request, book, member, issue, due-date, return-date and status fields.

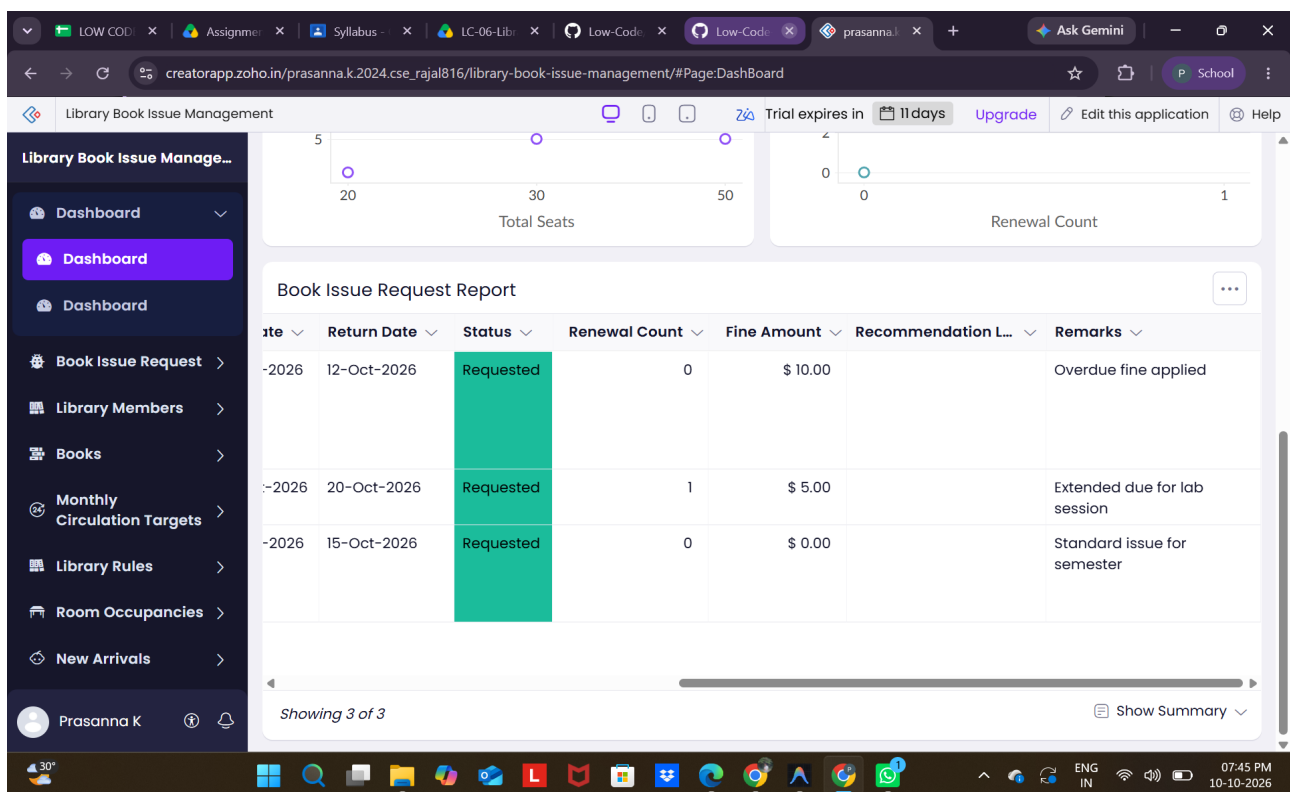

Figure 22: Reviewing additional report fields including renewal count, fine amount, recommendation letter and remarks.

Result:

The Library Book Issue Command Center layout was documented using Zoho Creator Page Builder. The screenshots show page creation, summary Panel and chart configuration, quick-action Buttons, the overall dashboard layout and the Book Issue Request Report. Verify the Gauge, Search, Board, embedded Form, Snippets, reminder Button, Widgets and Viewer in the live application before final submission.
