CLASS ACTIVITY 2

REPORT CONFIGURATION, PANELS AND APPLICATION DASHBOARD FOR HOSPITAL MANAGEMENT SYSTEM

Aim

To configure and demonstrate the forms, report views, dashboard panels and charts in the Hospital Management System using Zoho Creator, and to organize the information into a clear application dashboard.

Procedure

1. Open the Hospital Management System application in Zoho Creator and review the existing forms and records.
2. Review the relevant forms and identify the information captured by each form.
3. Open the report configuration options and examine the List, Calendar, Timeline, Spreadsheet and Kanban views.
4. Configure the five dashboard panels and review how each panel presents a key summary value.
5. Configure chart visualizations, review the chart previews and add the panels and charts to the application dashboard.
6. Verify the final dashboard and confirm that the hospital information is presented in a clear, consolidated view.

1. Forms

Forms are used to collect and maintain structured hospital information. Each form contains fields appropriate to its purpose and supports the connected reports and dashboard.

1. Appointment Form

The Appointment form stores patient and doctor selections, appointment date and time, reason for visit, status, reminder status and appointment code.

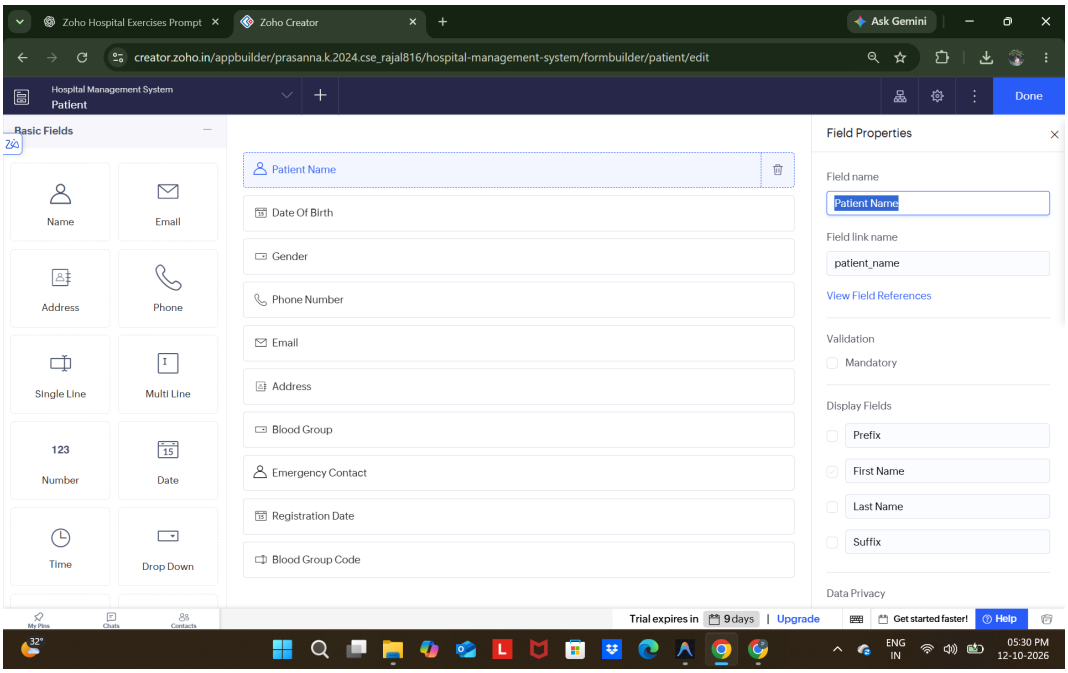

Figure 1: Appointment Form

2. Billing Form

The Billing form maintains patient and appointment references, billed amount, payment date, payment method, payment status and billing code.

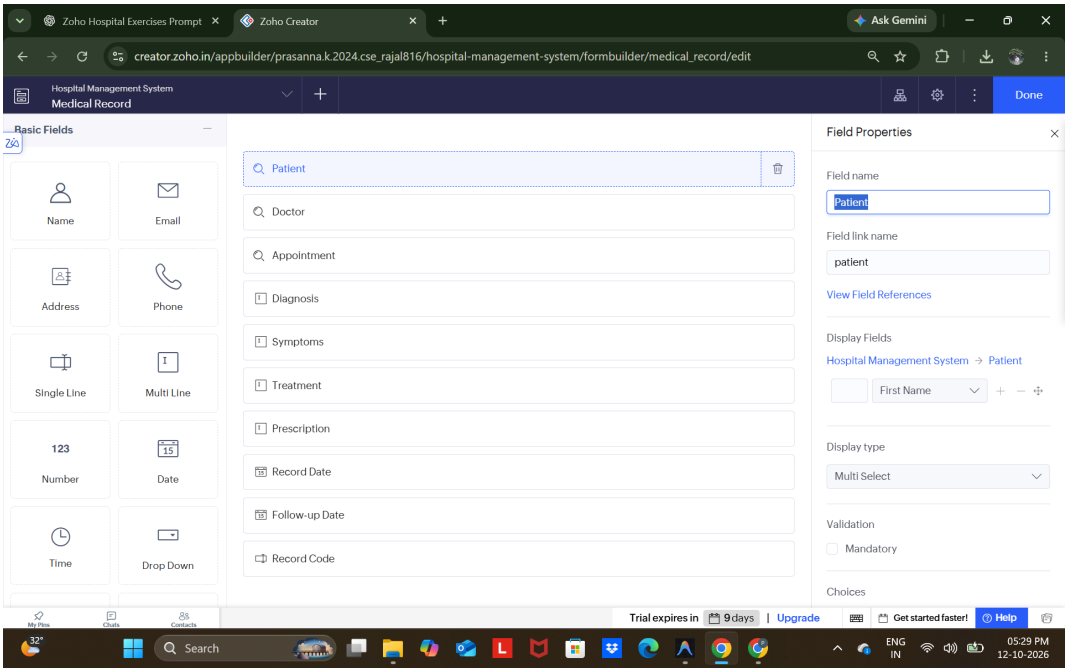

Figure 2: Billing Form

3. Department Form

The Department form records department name, department head, location, contact number, description and department code.

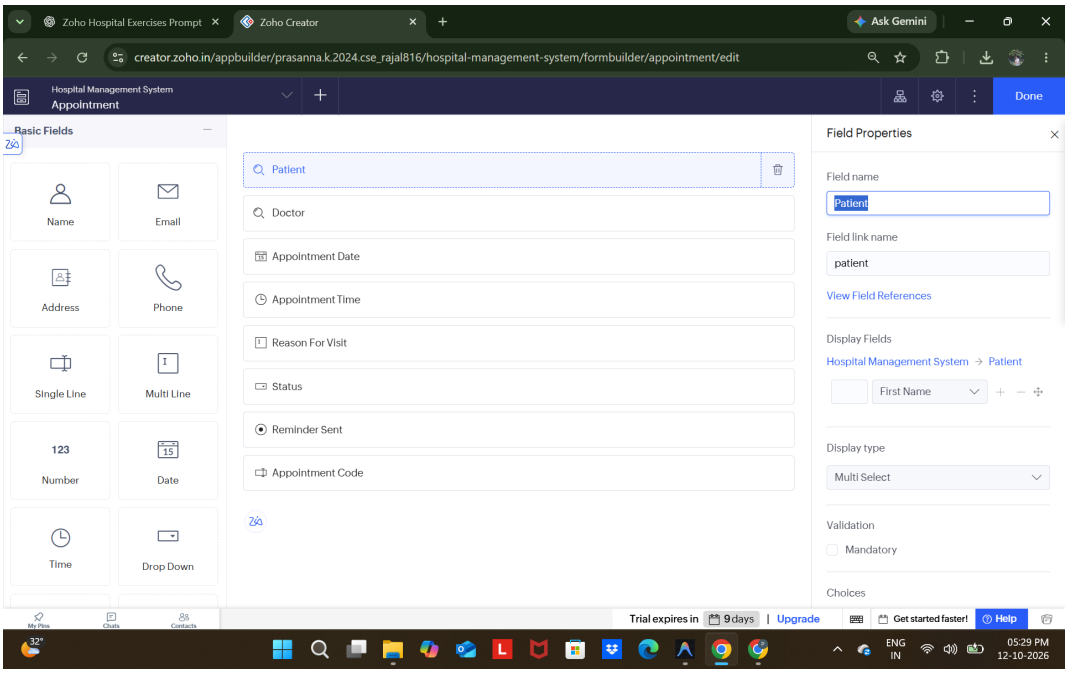

Figure 3: Department Form

4. Doctor Form

The Doctor form stores the doctor's name, specialization, phone number, email, department, availability status, consultation fee and doctor code.

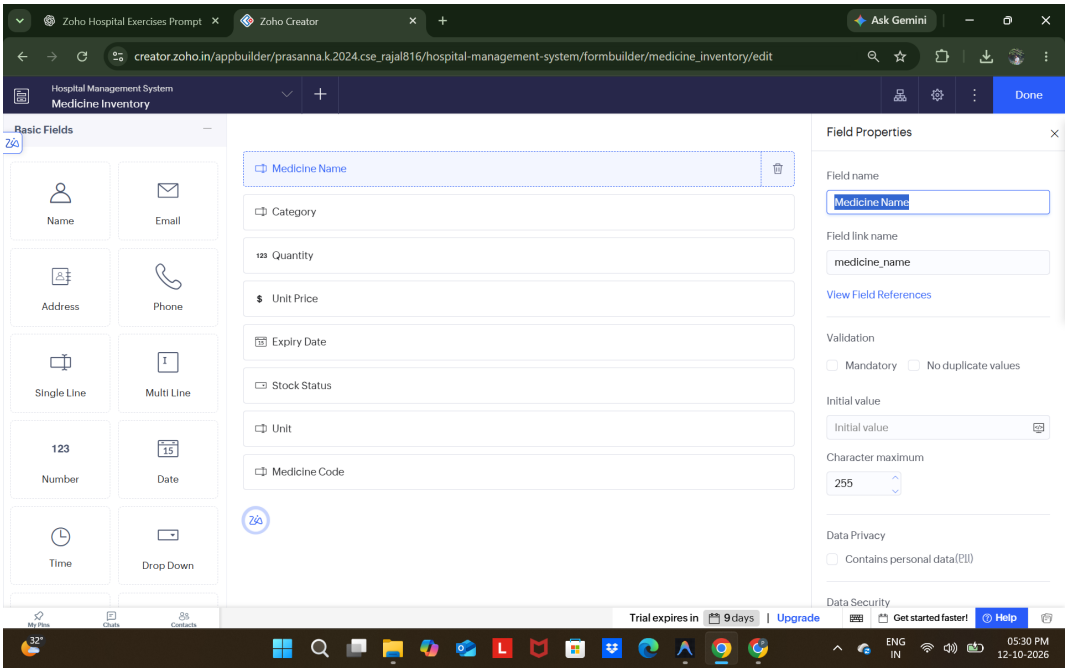

Figure 4: Doctor Form

5. Medicine Inventory Form

The Medicine Inventory form maintains medicine name, category, quantity, unit price, expiry date, stock status, unit and medicine code.

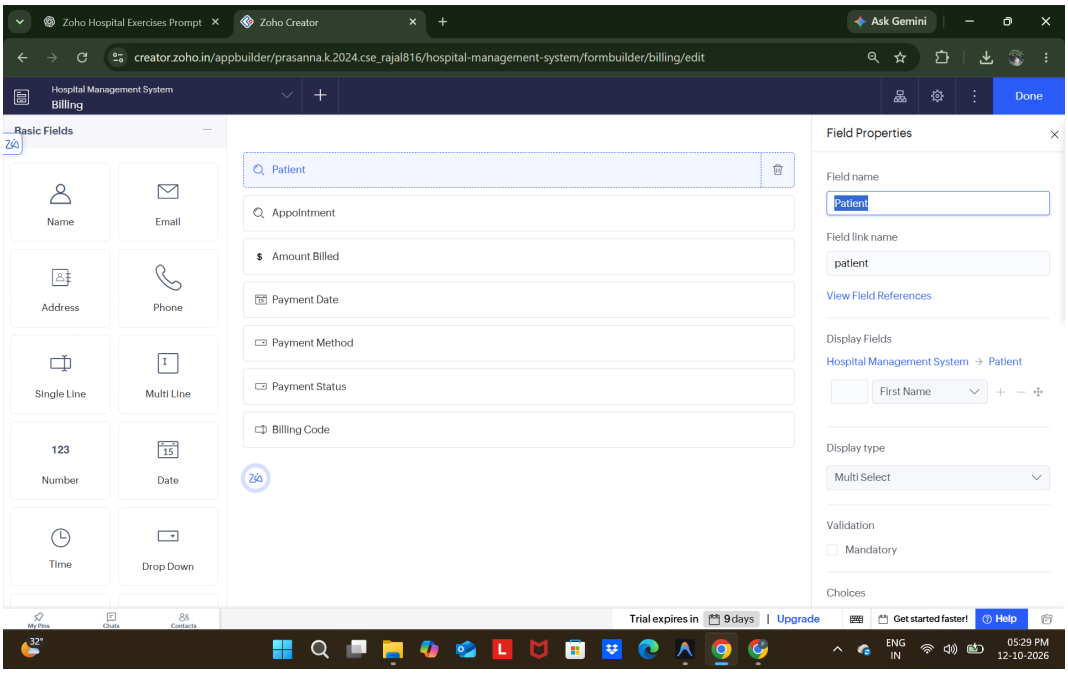

Figure 5: Medicine Inventory Form

6. Patient Form

The Patient form stores patient name, date of birth, gender, phone number, email, address, blood group, emergency contact and registration details.

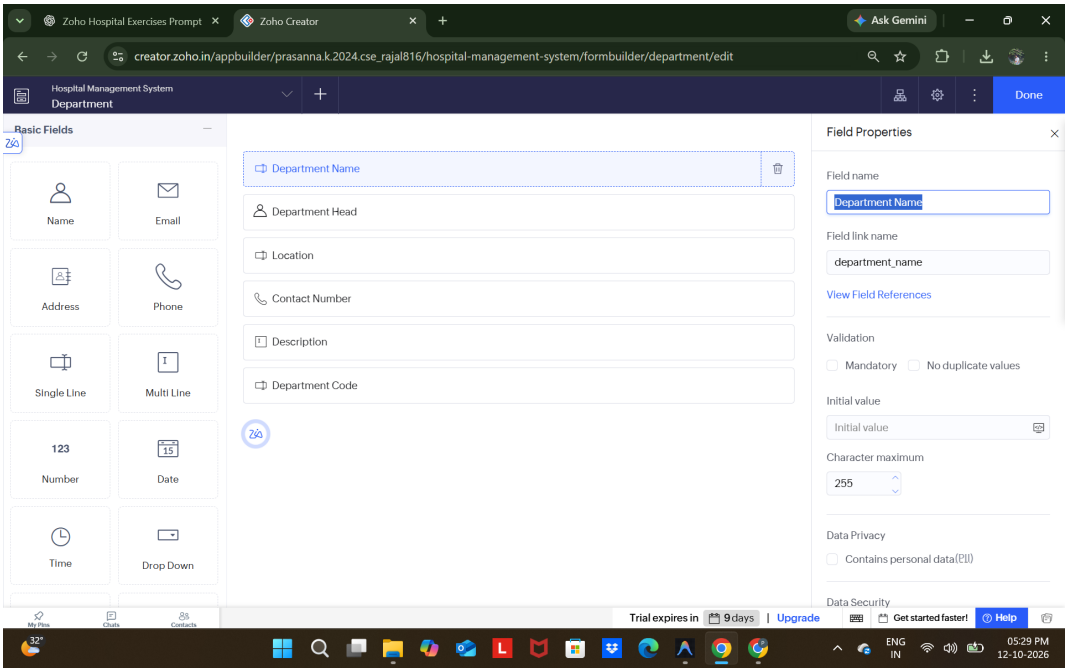

Figure 6: Patient Form

7. Medical Record Form

The Medical Record form links patients, doctors and appointments with diagnosis, symptoms, treatment, prescription, record date, follow-up date and record code.

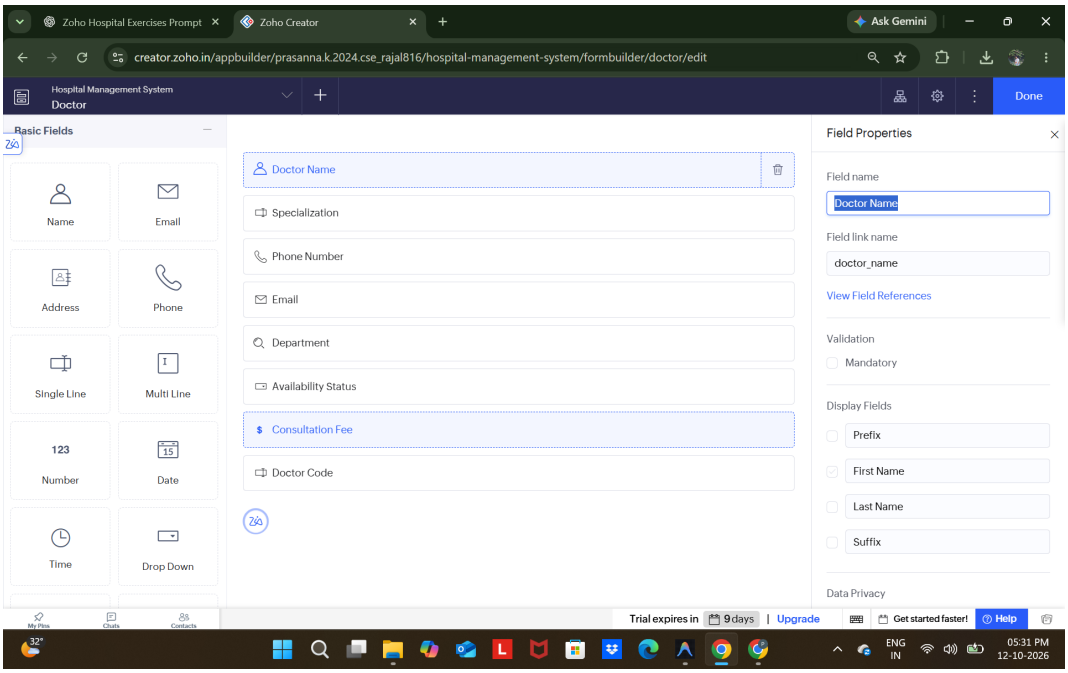

Figure 7: Medical Record Form

2. Report Configuration and Views

Reports present stored hospital records in different formats. The List view supports tabular inspection; Calendar and Timeline organize information by dates; Spreadsheet presents values in a grid; and Kanban groups records into cards by a selected field.

8. List Report – Main View

The List view displays medical records in a row-and-column layout for quick review of patient, appointment and clinical details.

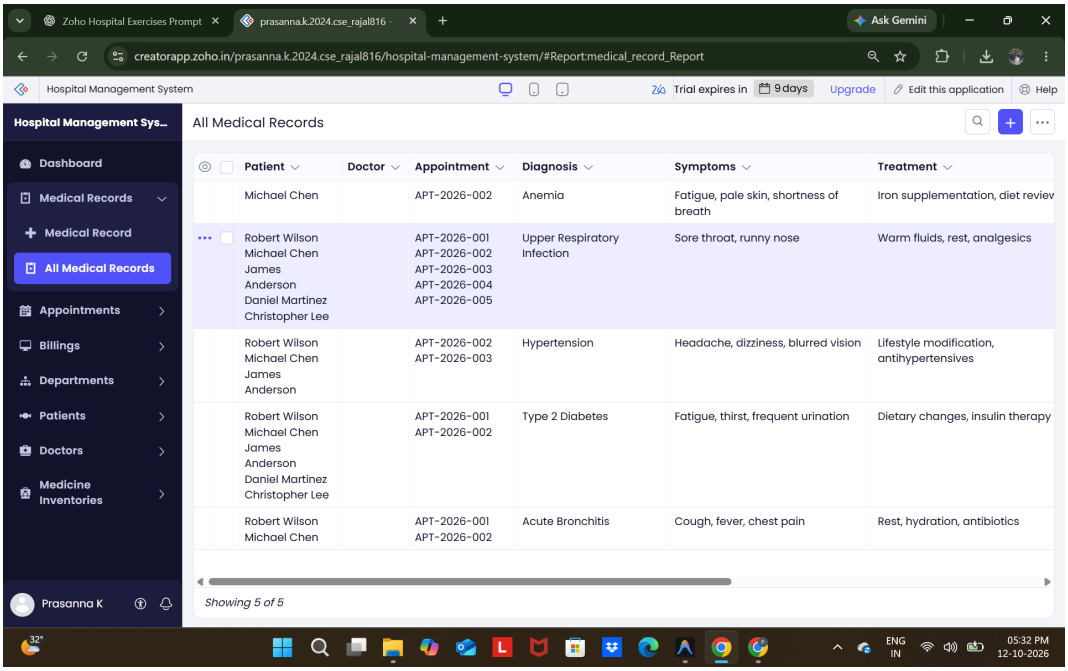

Figure 8: List Report – Main View

9. List Report – Record Details

The report shows additional record values in the tabular layout, allowing users to compare several medical records.

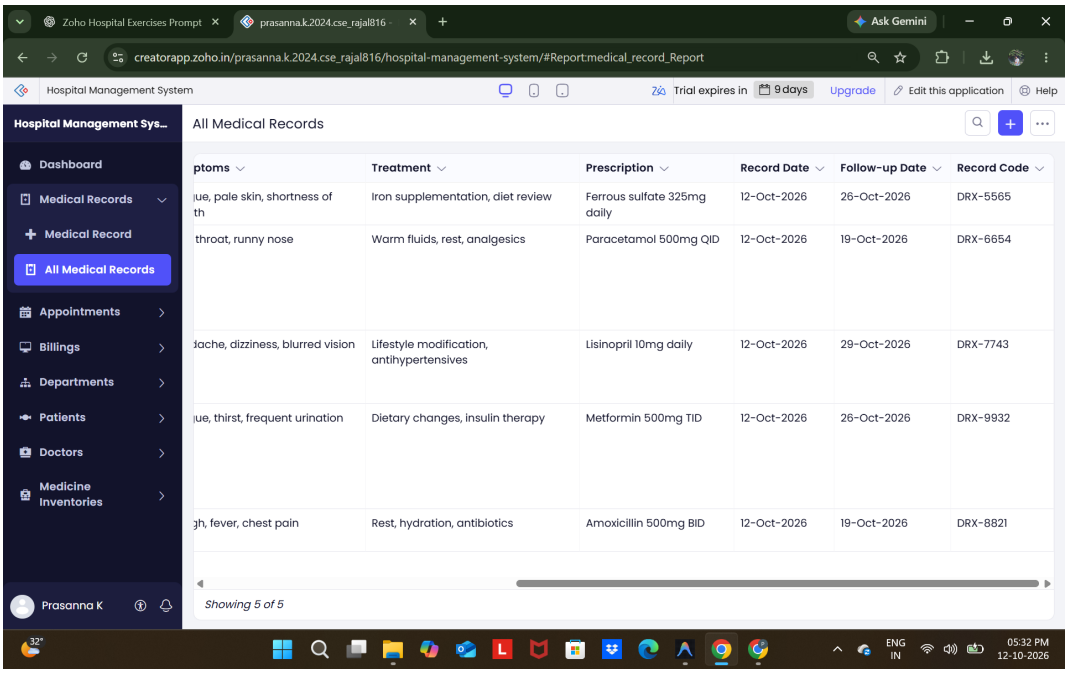

Figure 9: List Report – Record Details

10. List Report – Additional Columns

Horizontal scrolling exposes further fields in the report while retaining the same list-based record structure.

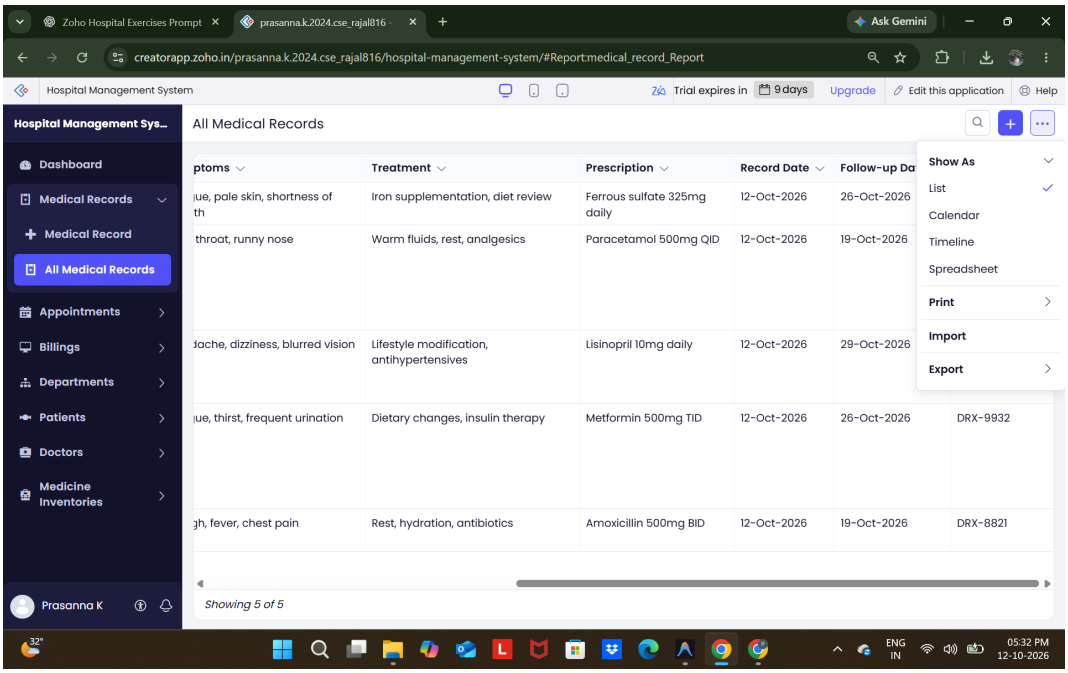

Figure 10: List Report – Additional Columns

11. Calendar Report – Configuration

The Calendar configuration selects the event title and the start and end date fields used to place records on a calendar.

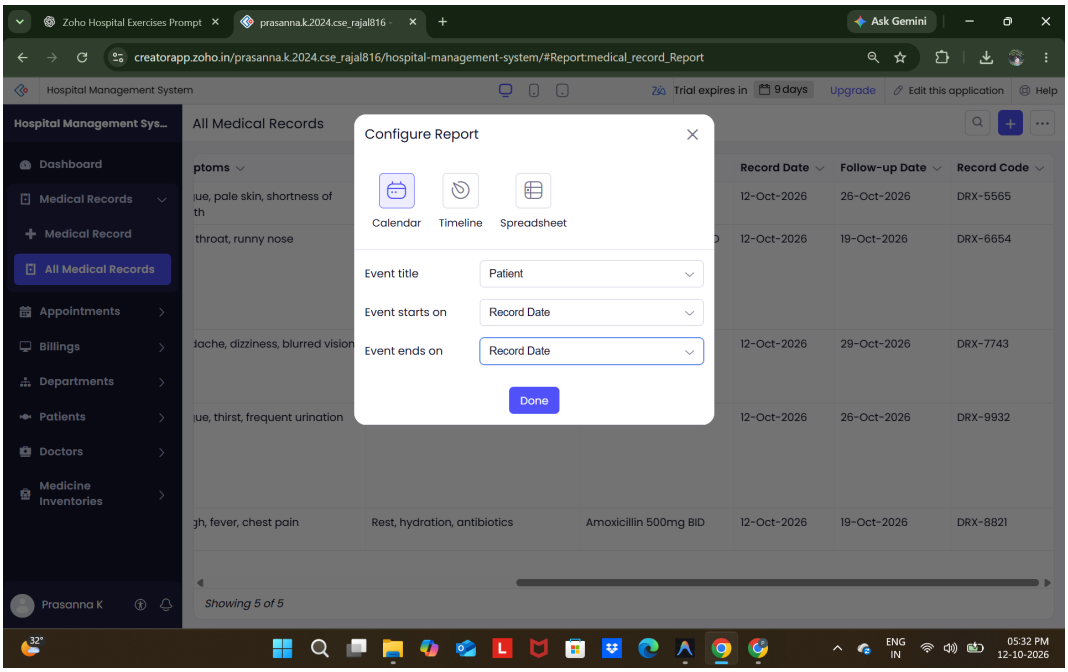

Figure 11: Calendar Report – Configuration

12. Calendar Report – Monthly View

The monthly calendar view places records on their relevant dates so that scheduled or date-based information can be reviewed visually.

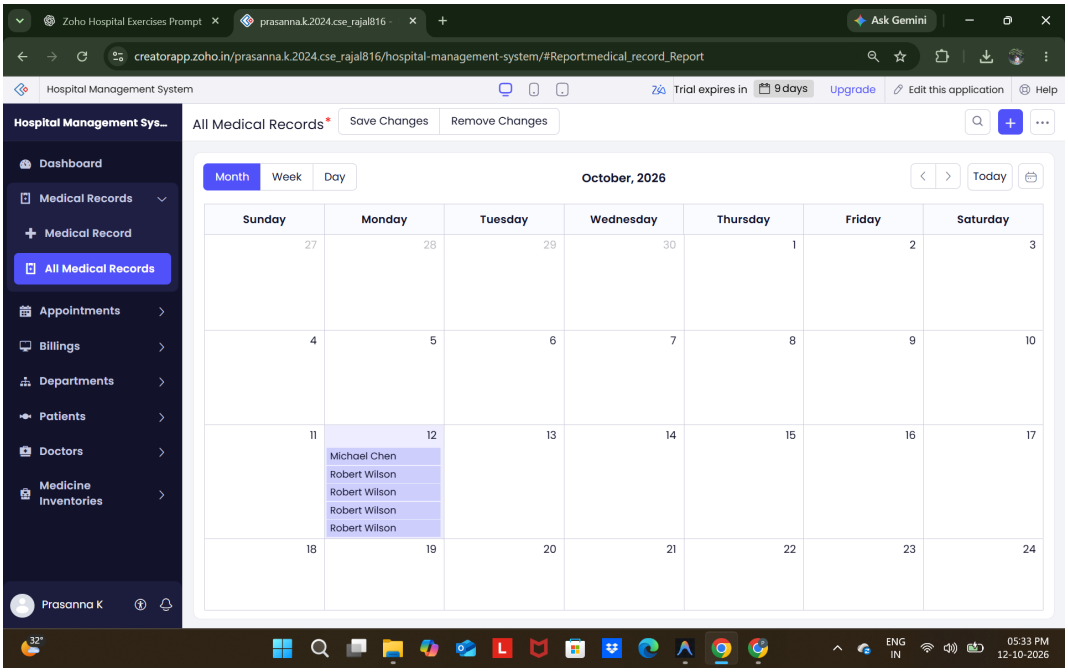

Figure 12: Calendar Report – Monthly View

13. Timeline Report – Configuration

The Timeline configuration defines the event title and date fields that determine where each record appears on the timeline.

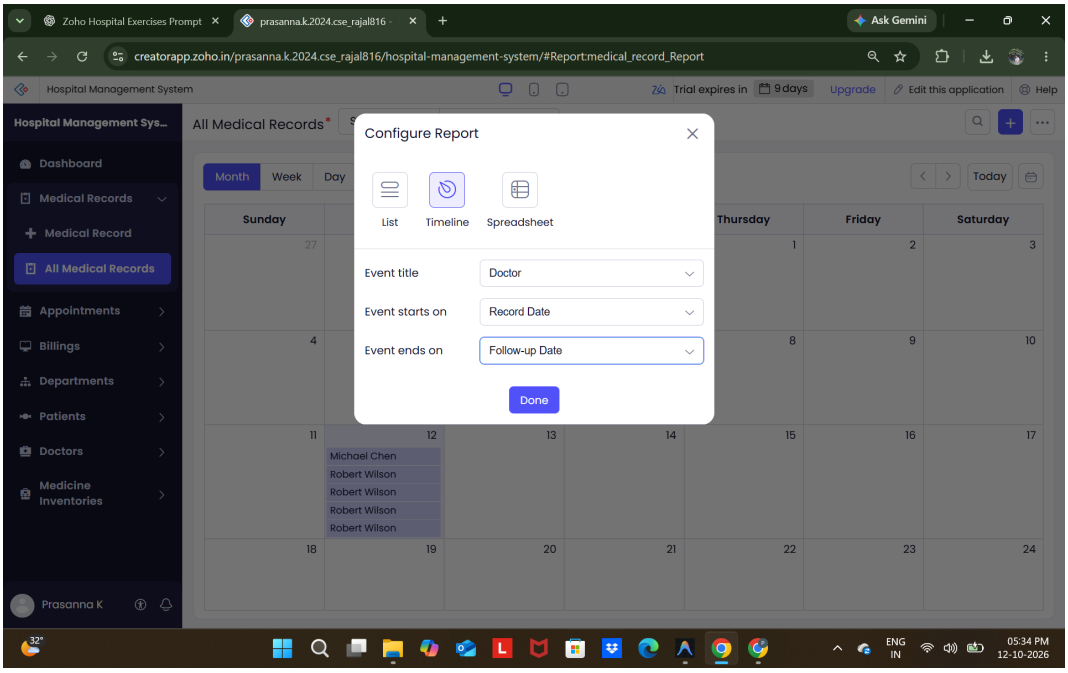

Figure 13: Timeline Report – Configuration

14. Timeline Report – Time View

The timeline displays records across a time scale, supporting date-based review of medical records.

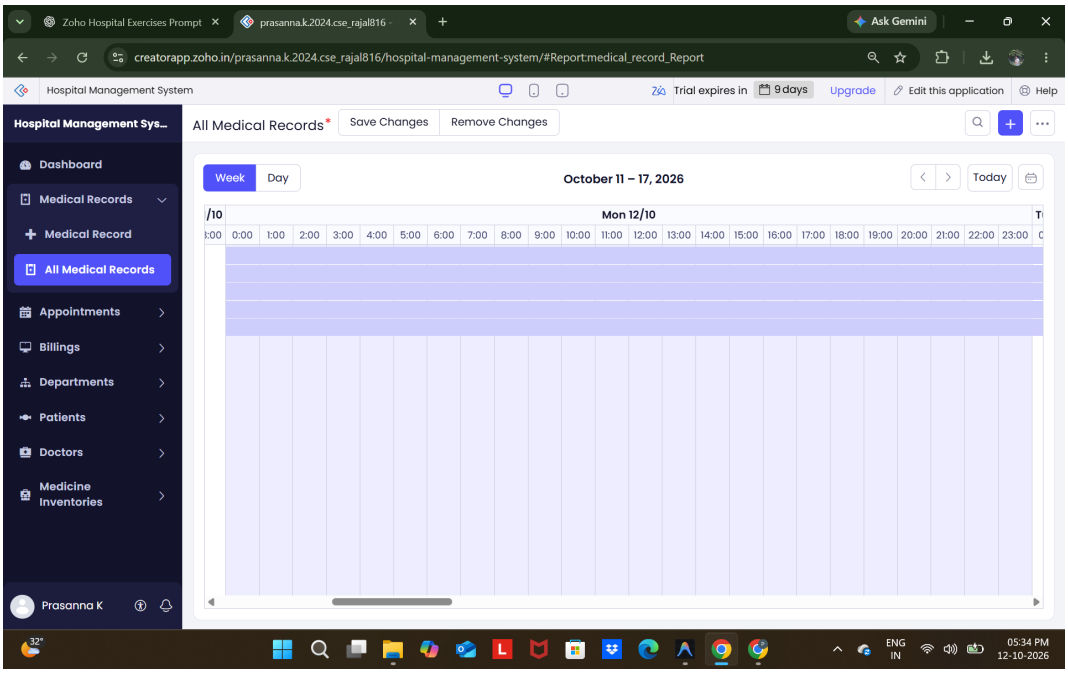

Figure 14: Timeline Report – Time View

15. Spreadsheet Report – Main View

The Spreadsheet view presents report values in a grid that resembles a spreadsheet and supports inspection of many fields.

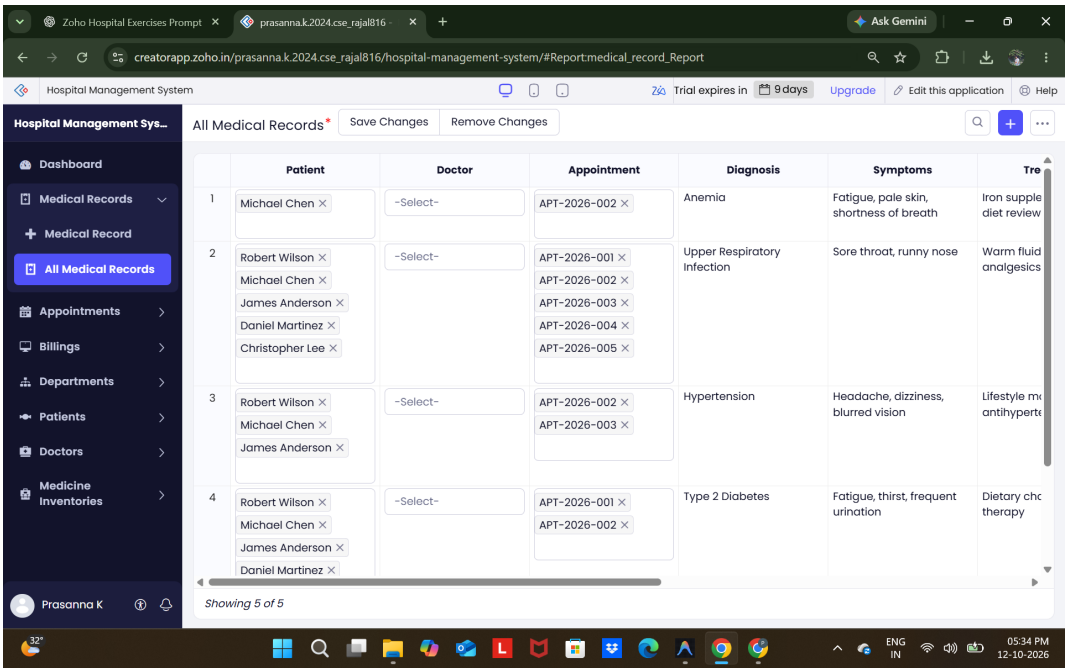

Figure 15: Spreadsheet Report – Main View

16. Spreadsheet Report – Additional Fields

The wider spreadsheet layout allows users to review more columns by moving horizontally through the report.

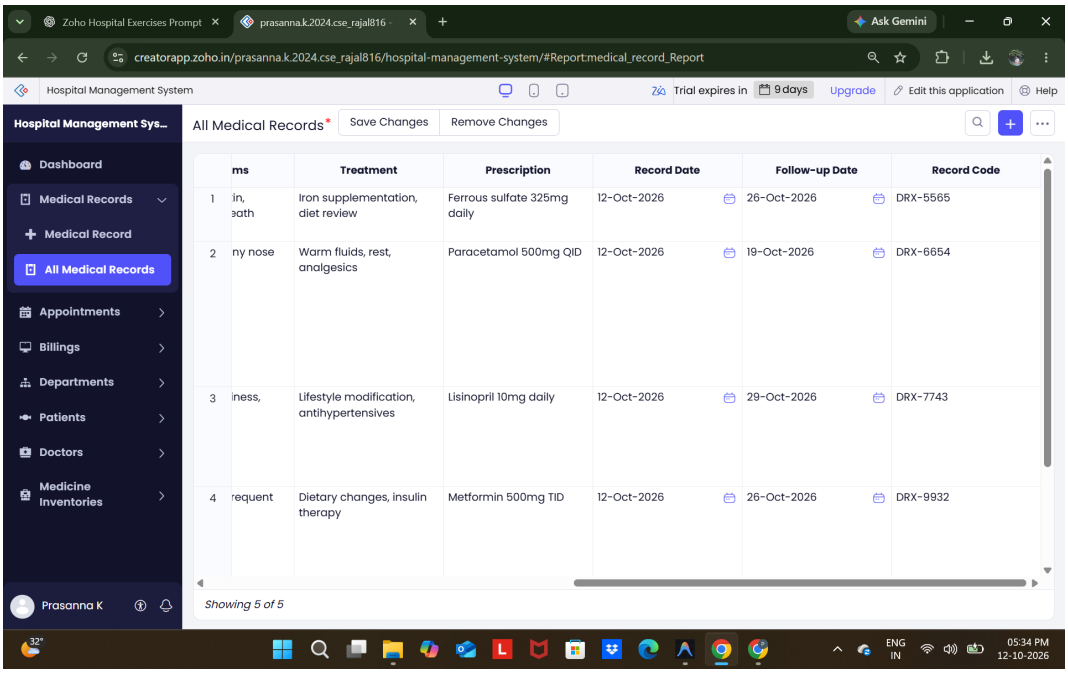

Figure 16: Spreadsheet Report – Additional Fields

17. Spreadsheet Report – Selected Cells

The spreadsheet-style report shows related patient and appointment values in editable-looking cells for convenient record inspection.

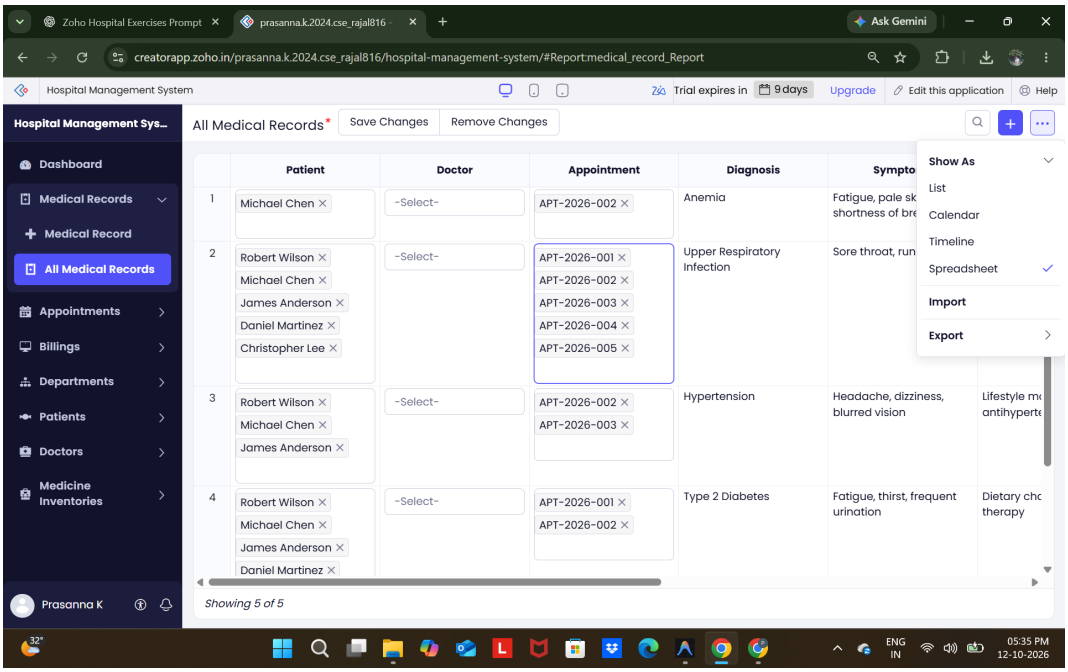

Figure 17: Spreadsheet Report – Selected Cells

18. Kanban Report – Configuration

The Kanban configuration groups records by a selected field, here Payment Method, so records can be compared as separate cards.

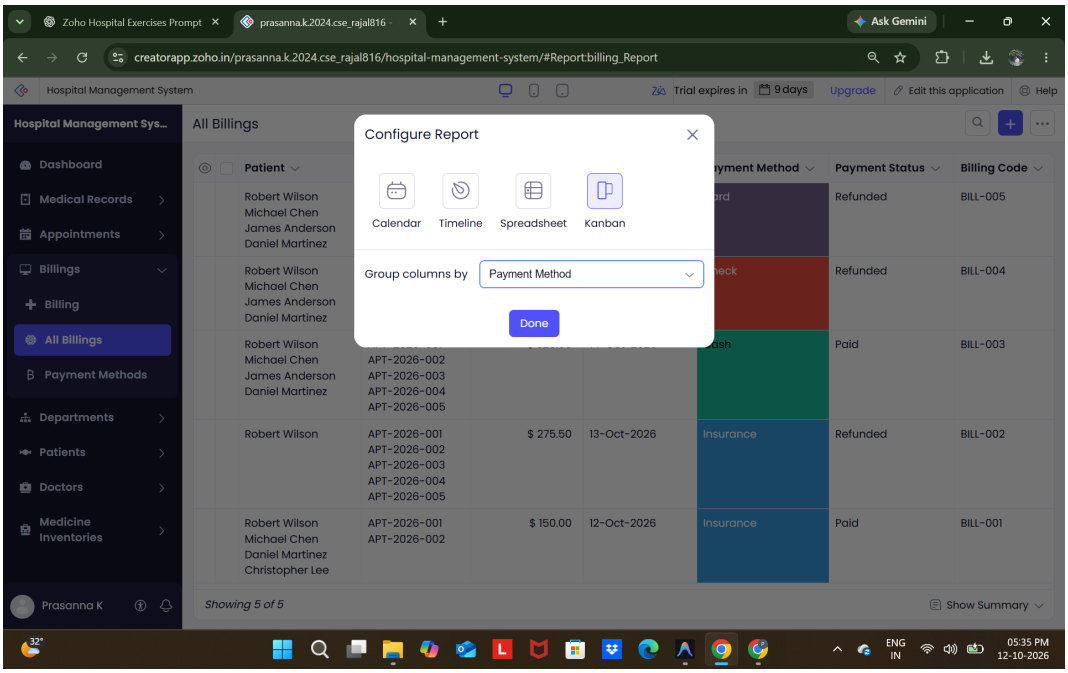

Figure 18: Kanban Report – Configuration

3. Dashboard Panels

Panels summarize important values in compact visual blocks. Different colors and panel arrangements help distinguish indicators and make the dashboard easier to scan.

19. Panel Layout – Overview

The panel layout brings key hospital indicators together in a compact dashboard area.

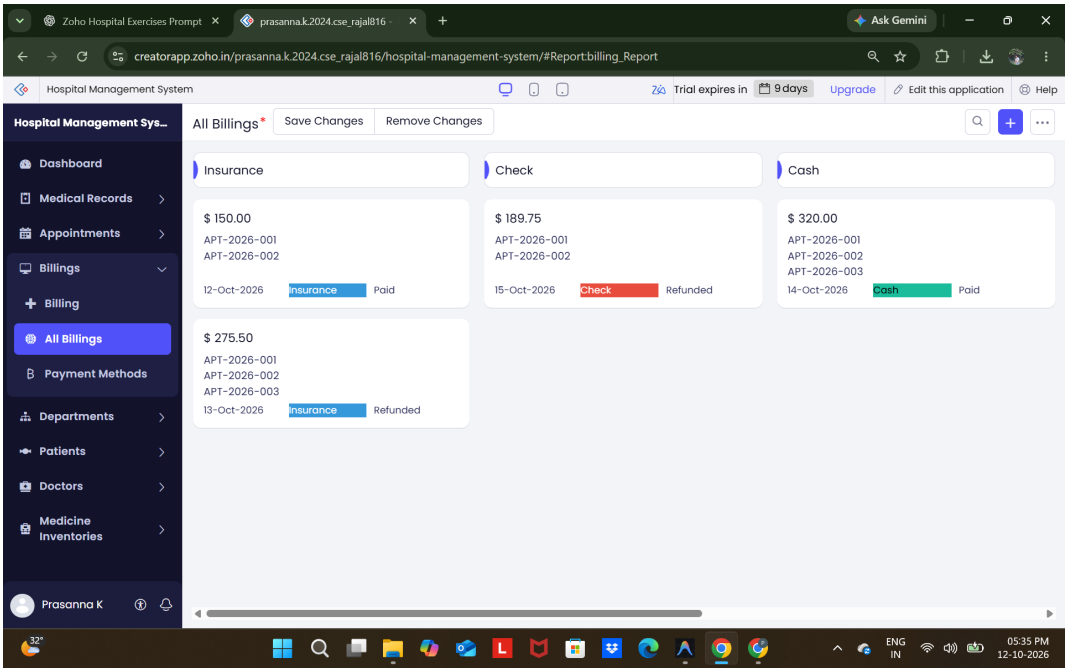

Figure 19: Panel Layout – Overview

20. Panel Layout – Updated Overview

The updated panel arrangement shows multiple summary indicators and their labels in a single view.

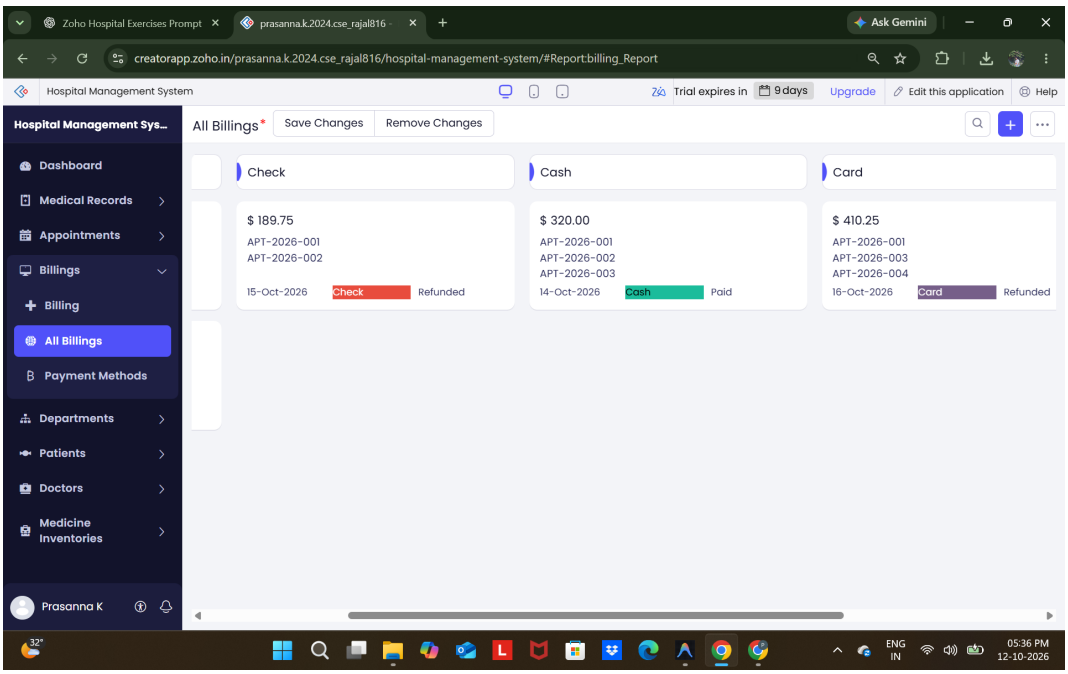

Figure 20: Panel Layout – Updated Overview

21. Panel 1 – Red Summary Panel

Panel 1 uses a red style to emphasize a key hospital summary value and its label.

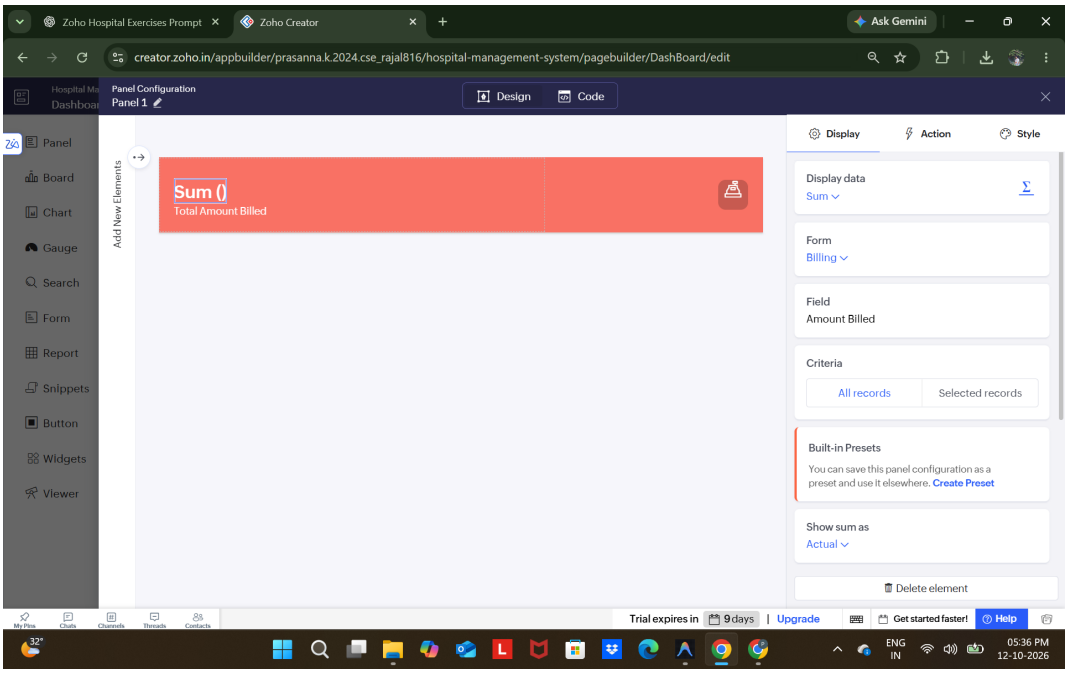

Figure 21: Panel 1 – Red Summary Panel

22. Panel 2 – Orange Summary Panel

Panel 2 uses an orange style to distinguish a second summary indicator.

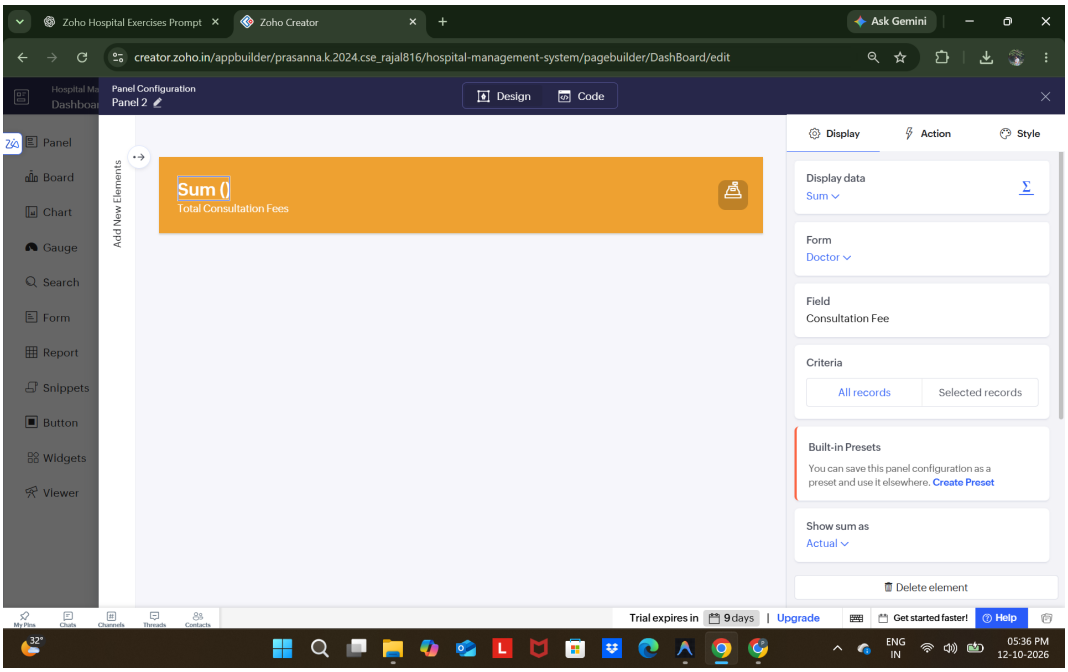

Figure 22: Panel 2 – Orange Summary Panel

23. Panel 3 – Green Summary Panel

Panel 3 uses a green style to present another key summary value.

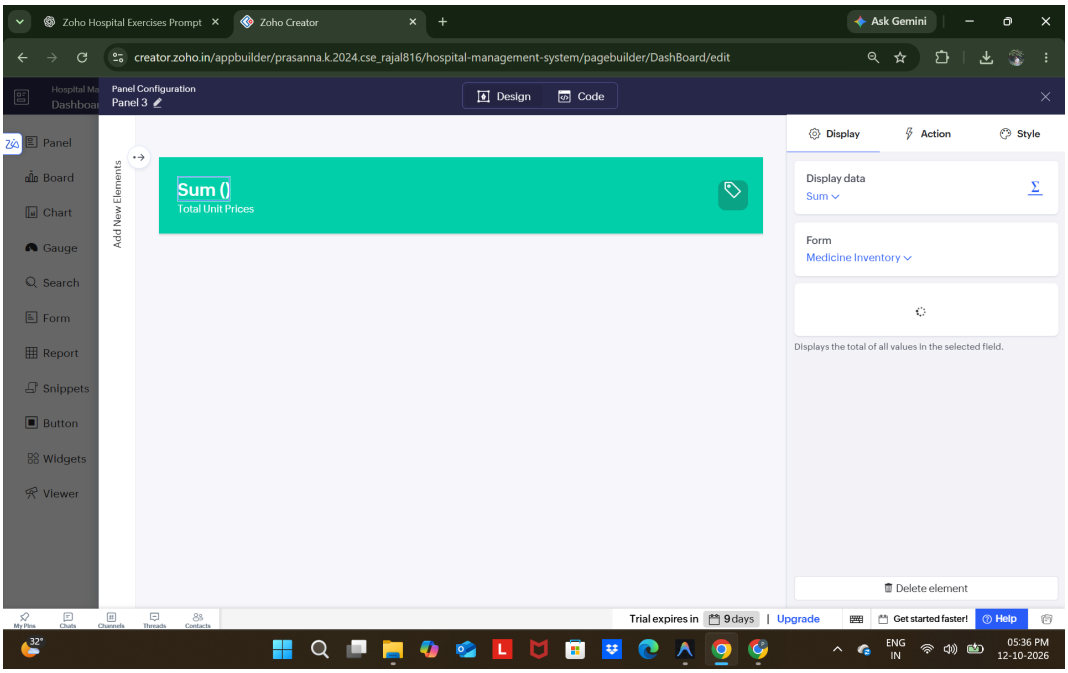

Figure 23: Panel 3 – Green Summary Panel

24. Panel 4 – Blue Summary Panel

Panel 4 uses a blue style to visually separate its metric from the other panels.

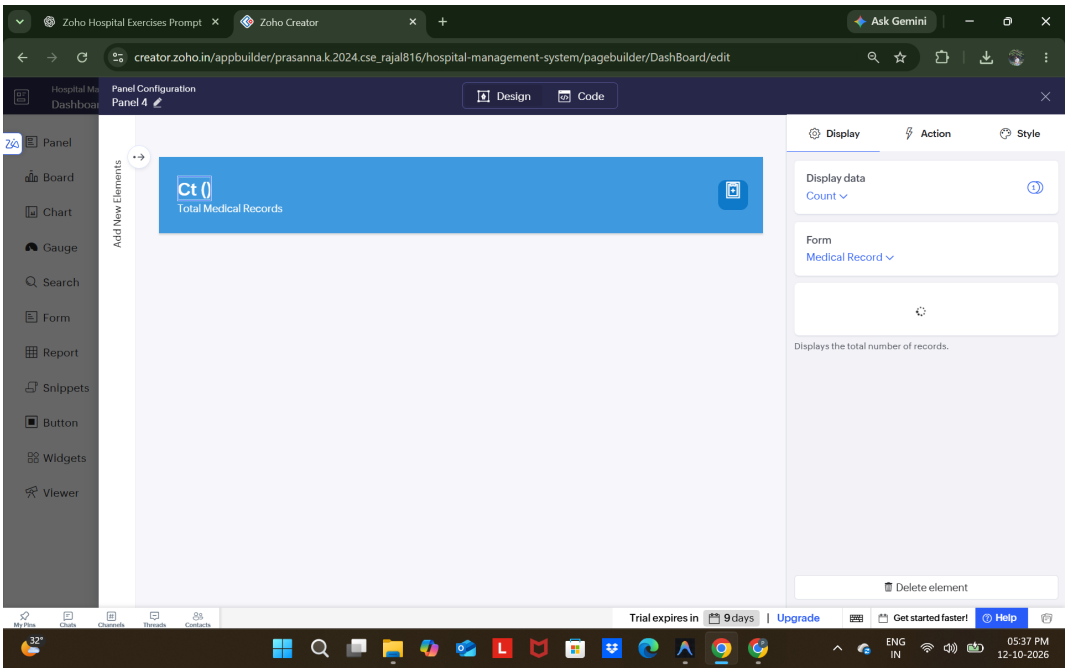

Figure 24: Panel 4 – Blue Summary Panel

25. Panel 5 – Multi-Indicator Panel

This panel layout presents multiple compact indicators together for a quick overview of hospital activity.

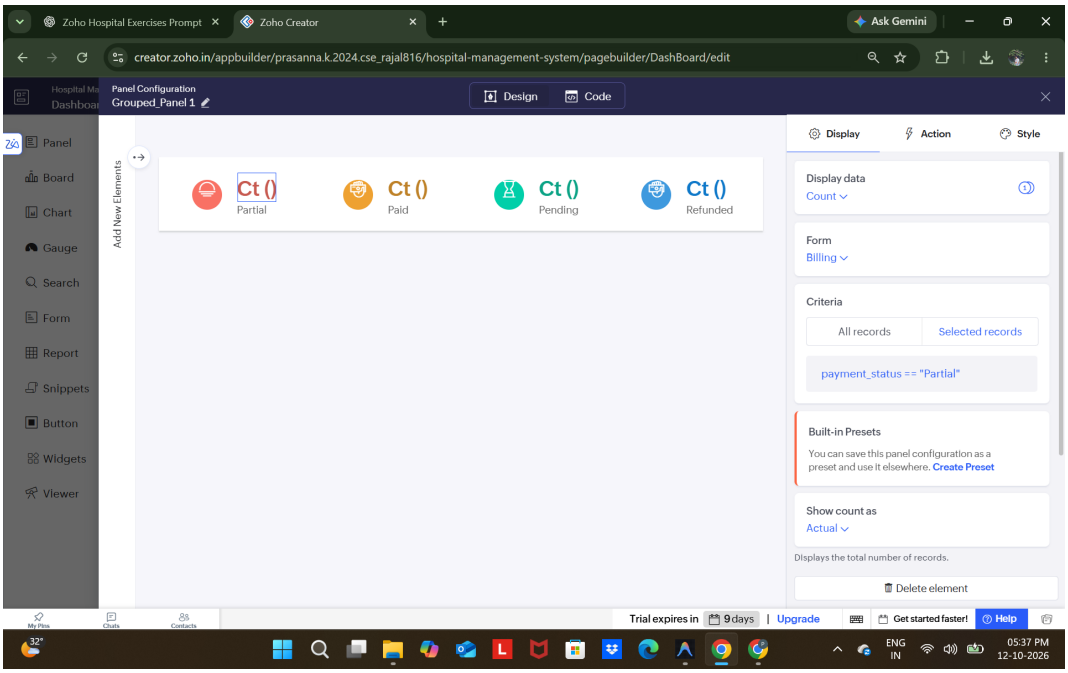

Figure 25: Panel 5 – Multi-Indicator Panel

4. Chart Configuration and Application Dashboard

Charts convert report data into visual comparisons. The chart builder is used to select chart types and configure the data, while the application dashboard combines panels and charts in one place.

26. Chart Configuration – Initial Setup

The chart builder is opened to select the data and visualization settings for a dashboard chart.

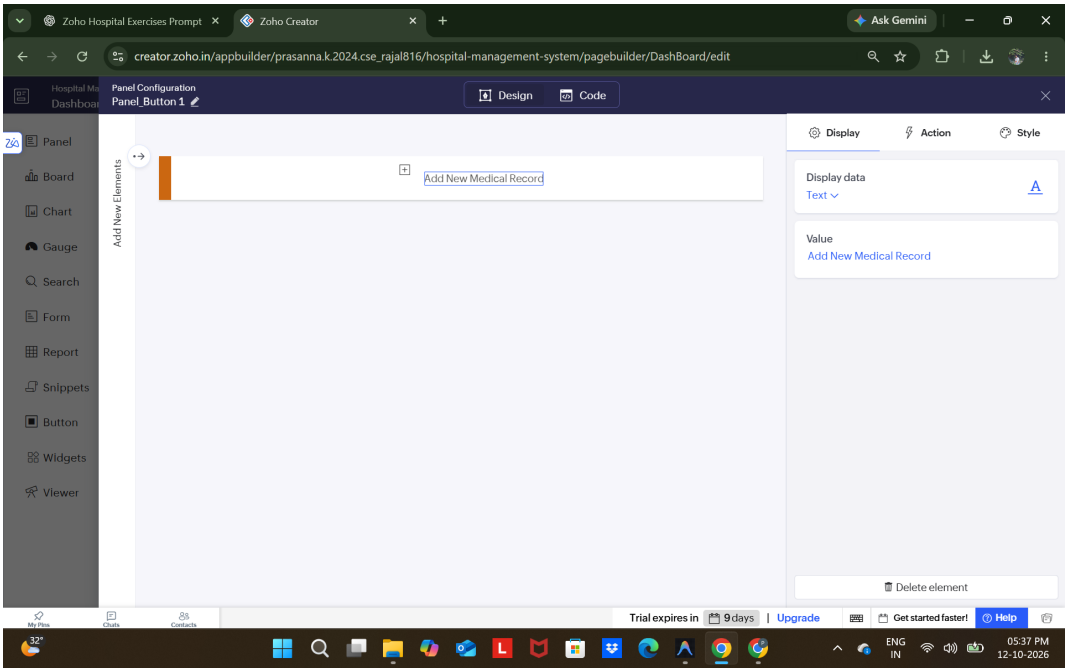

Figure 26: Chart Configuration – Initial Setup

27. Chart Configuration – Data Setup

The chart settings area is used to choose the fields that supply chart categories and values.

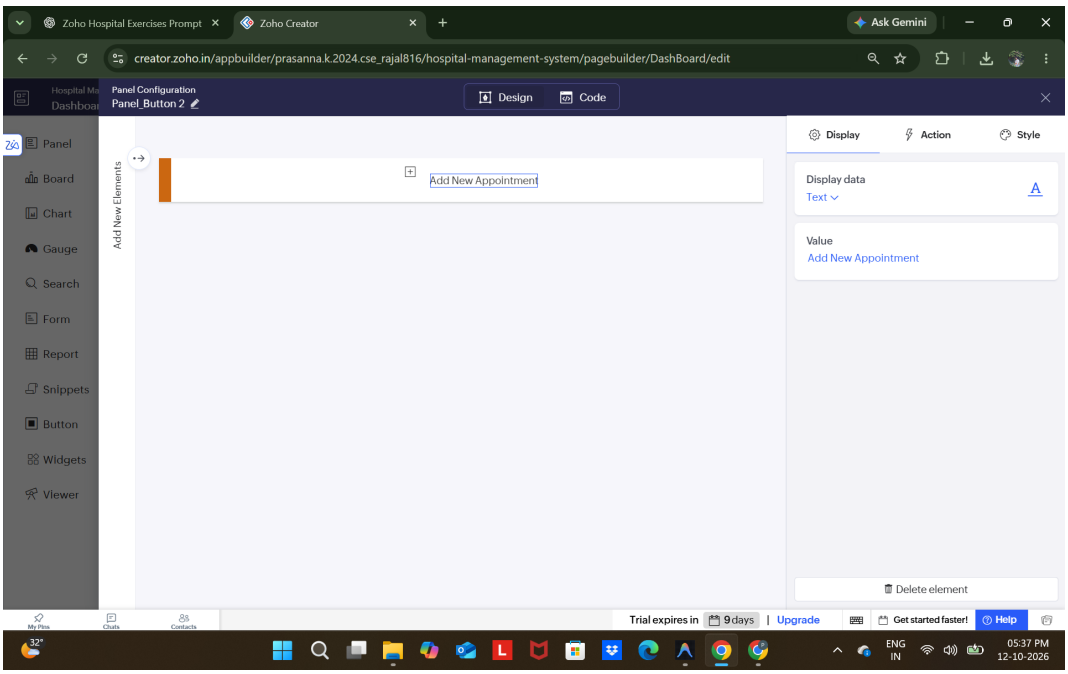

Figure 27: Chart Configuration – Data Setup

28. Chart Configuration – Options

The configuration view provides controls for adjusting how the selected chart is displayed.

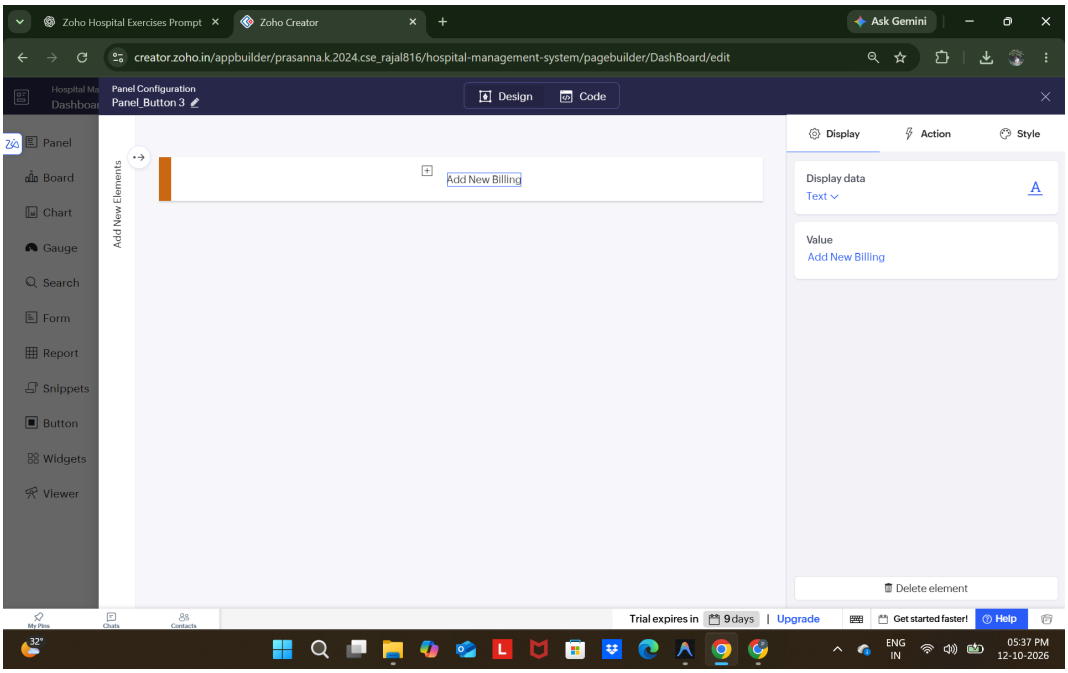

Figure 28: Chart Configuration – Options

29. Column Chart – Preview

The chart preview displays hospital data as vertical columns for comparison between categories.

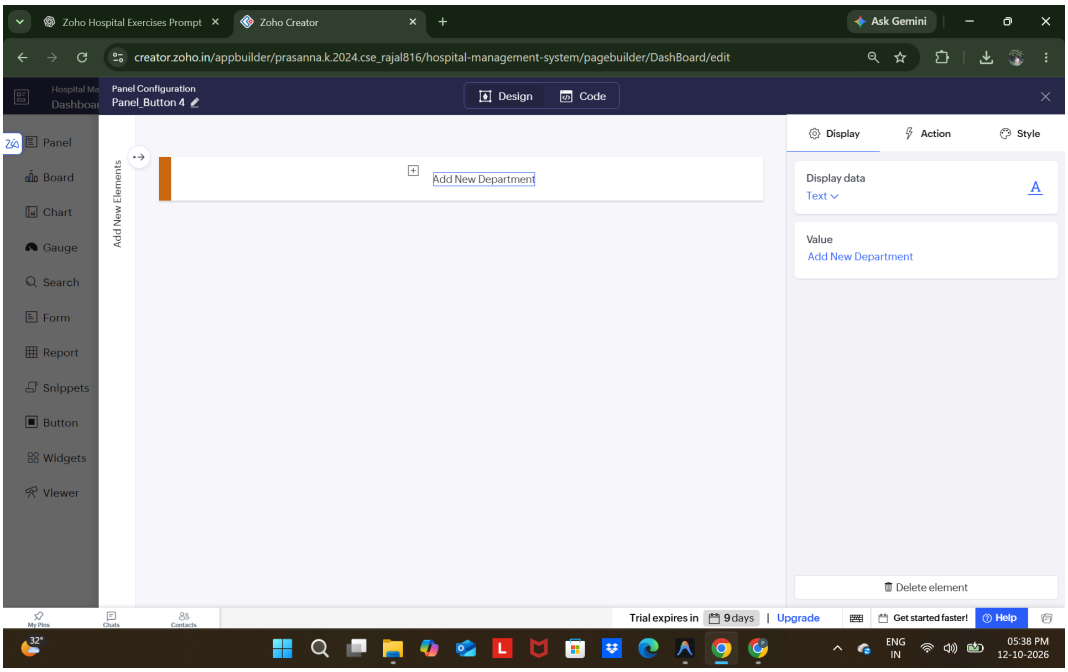

Figure 29: Column Chart – Preview

30. Bar Chart – Preview

The horizontal bar chart compares category values in a compact visual form.

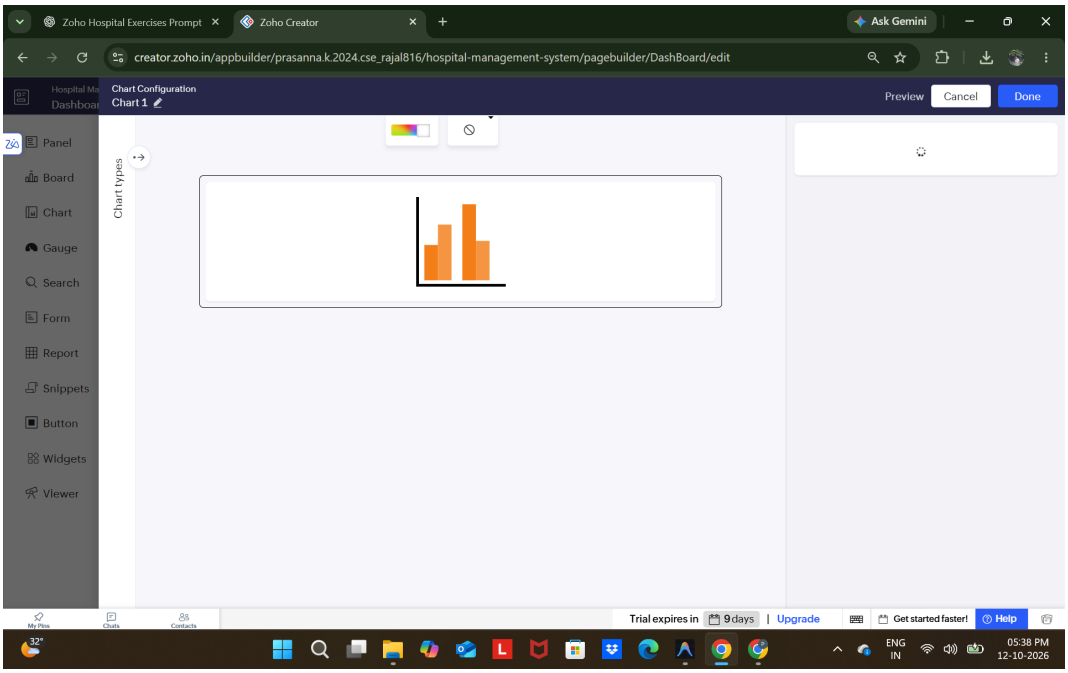

Figure 30: Bar Chart – Preview

31. Chart Formatting – Bar View

The chart editor displays the configured horizontal bar chart and its related settings.

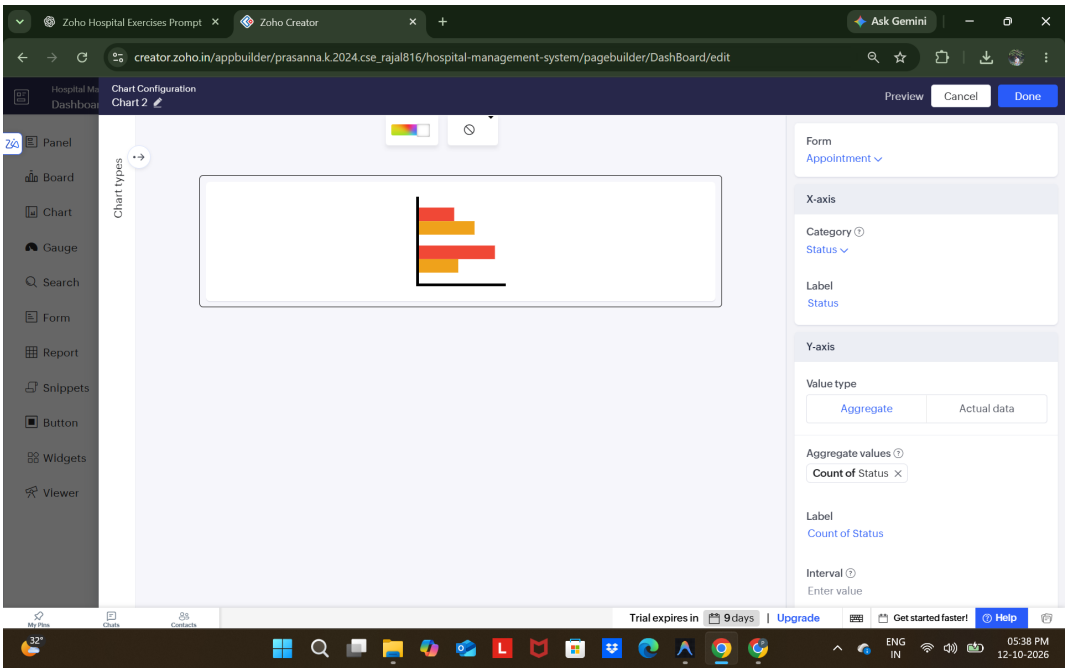

Figure 31: Chart Formatting – Bar View

32. Chart Formatting – Grid View

The selected visualization and its data configuration are shown in the chart editor.

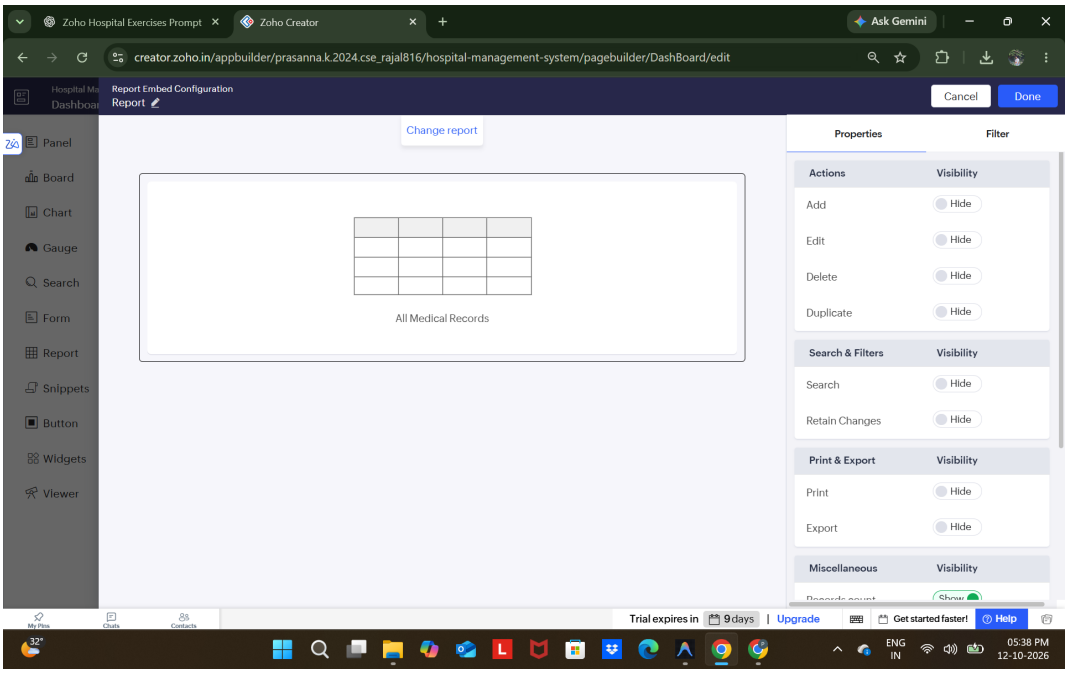

Figure 32: Chart Formatting – Grid View

33. Application Dashboard – Panel and Chart View

The application dashboard combines summary panels and charts to provide an at-a-glance view of hospital information.

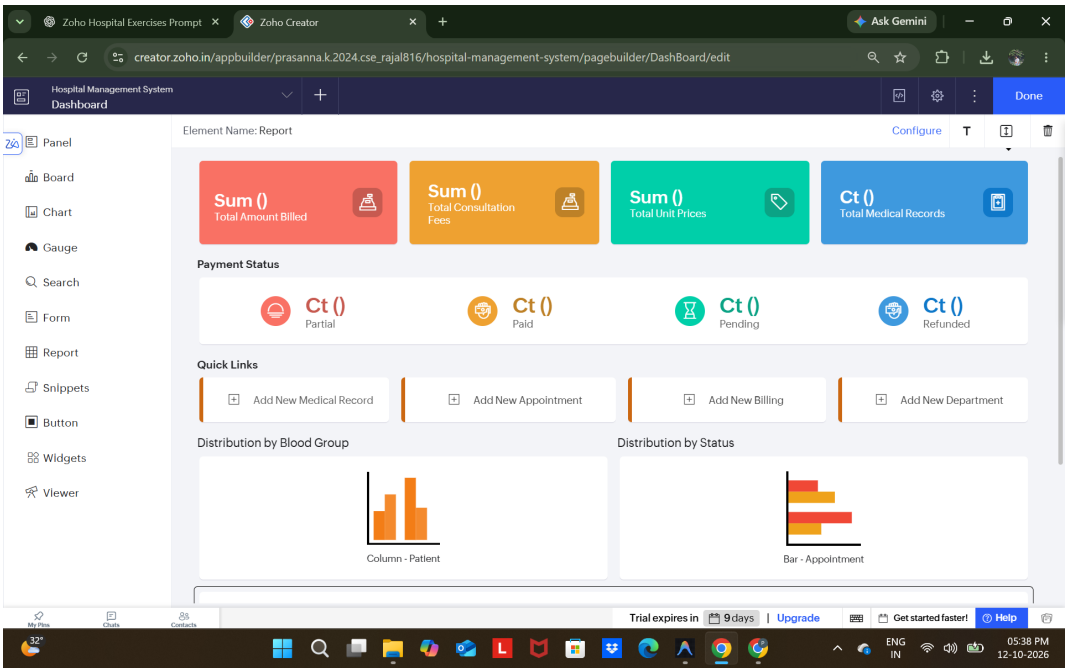

Figure 33: Application Dashboard – Panel and Chart View

34. Application Dashboard – Final View

The final dashboard presents key figures and charts together as a consolidated overview for the Hospital Management System.

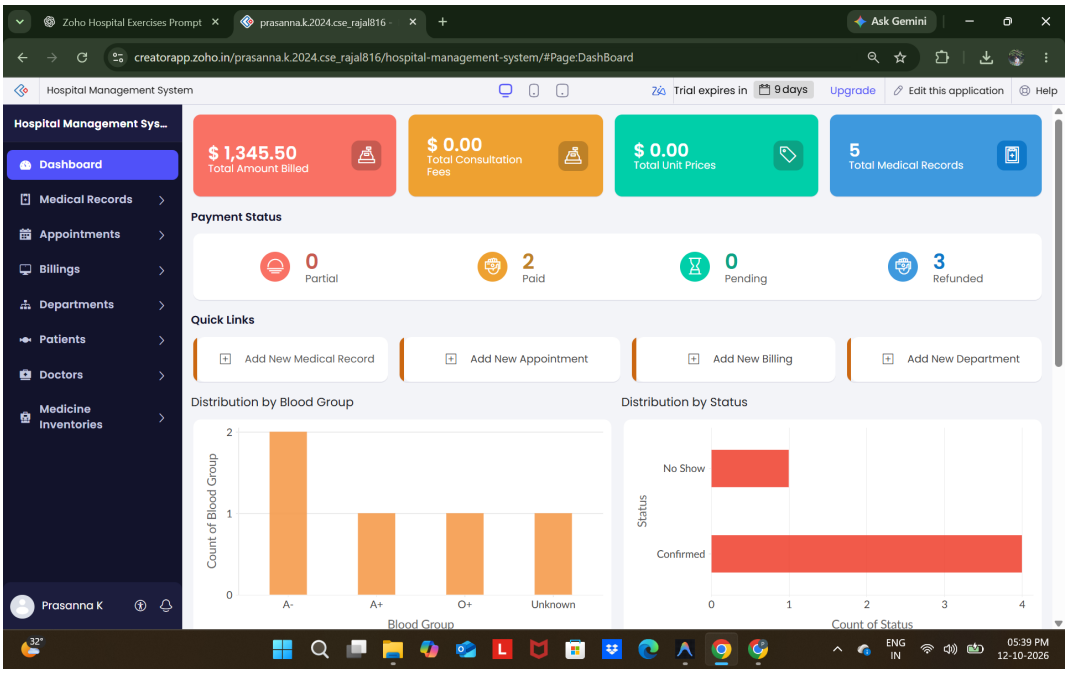

Figure 34: Application Dashboard – Final View

Result

The Hospital Management System activity was documented successfully using the uploaded screenshots. The forms, report views, dashboard panels, chart configurations and final application dashboard were arranged into an organized class-activity record.
